CONTENTS

OF THE

REGISTRAR-GENERAL'S ANNUAL REPORT FOR 1890.

REPORT:— PAGE

POPULATION. Estimated and actual increase . . . . . v-vi

MARRIAGES. Marriage-rate; Relation between Marriage Rate and commercial activity; Forms of Marriage; Increase of Church and Roman Catholic Marriages; Preference for Marriage by Banns; Previous Civil Condition of Persons married; Ages at Marriage; Signature in Marriage Register; Buildings registered for the Solemnisation of Marriages; Certified Places of Worship . . vi-viii

BIRTHS. Numbers and Rates; Sex; Illegitimate Births . . . ix

DEATHS. General death-rate; County death-rates; Sex; Ages; Excessive Mortality after middle Age; Infant Mortality, comparison between Sexes; Urban and Rural Mortality; Registered Causes of Death; Zymotic or Specific Febrile Diseases; Epidemic Influenza; Hydrophobia; Puerperal Fever; Dietetic, Constitutional, Developmental, and Local Diseases; Deaths from Violence; Deaths of Infants from Suffocation in Bed; Ill-defined and Un-specified Causes; Certification of Causes of Death . . . . . ix-xvii

OFFENCES AGAINST THE REGISTRATION ACT xviii

PROGRESS of REGISTRATION. Aggregate Number of NAMES on the REGISTERS; NUMBER of SEARCHES in the Registers and of CERTIFICATES granted at the CENTRAL OFFICE; FEES received . . xviii

THE ARMY AND NAVY. STRENGTH and MORTALITY of the ARMY at HOME and ABROAD; STRENGTH and MORTALITY of the NAVY . xviii

BIRTHS and DEATHS of BRITISH SUBJECTS at SEA. MARINE REGISTER BOOK; MORTALITY of MERCANTILE MARINE; MORTALITY among PASSENGERS xix

INTERNATIONAL VITAL STATISTICS. Rise in Death Rates . . . xix

METEOROLOGY; Remarks by James Glaisher, Esq., F.R.S. . . . xx-xxii

PRELIMINARY TABLES . . . . . xxiii-lxxv

ABSTRACTS:—

BIRTHS (distinguishing Legitimate and Illegitimate), DEATHS and MARRIAGES Registered in England, and in its Registration Divisions, Counties, and Districts; and BIRTHS and DEATHS in sub-districts . 1-63

MARRIAGES, Analysis of, in Registration Divisions and Counties; distinguishing the mode of Solemnisation, the number in each quarter of the year, the Previous Civil Condition of Persons married, those not of Full Age, and the Signatures in the Marriage Register 64-67

AGES of Persons married, distinguishing those of Bachelors, Spinsters, Widowers, Widows 68-70

DEATHS of Males and Females in Public Institutions. . . . 71-94

DEATHS of Males and Females at different Age-periods, in REGISTRATION DIVISIONS and COUNTIES 95-105

A 68169. Wt. 7931. a 2

ABSTRACTS—*continued.* PAGE

Causes of Death of Males and Females at different Periods of Life in England and Wales 107–121

Causes of Death of Males and Females at different Periods of Life in London 122–135

Causes of Death of Males and Females in each Registration County 136–159

Deaths from certain Selected Causes, and Inquest Cases, in Registration Divisions, Counties, and Districts . . 160–192

Deaths from Accident and Negligence, distinguishing Sex, Age, and Cause or Character of Accident 193–199

Deaths from Suicide, distinguishing Sex, Age, and Method . . . 200–201

Deaths from Murder, distinguishing Sex, Age, and Method . . 202–203

Deaths from Manslaughter, distinguishing Sex, Age, and Method . 204–205

Indexes of Registration Districts, Sub-districts, and of certain Towns, referring to Numbers used in the several Tables of Abstracts . . 206–221

REPORT

TO

The Right Honourable CHARLES T. RITCHIE, M.P., President of the Local Government Board, &c. &c.

(1890.)

SIR,

I HAVE the honour to submit to you the following report on the marriages, births, and deaths registered in England and Wales in the year 1890.

POPULATION.

Since my last annual report was presented to you a census has been taken; and the result, subject to final revision, was that in April last the population of England and Wales consisted of 29,001,018 persons.

Assuming that the growth was equable throughout the past intercensal period, the population in the middle of the year 1890 amounted to 28,762,287 persons, of whom 13,939,577 were males and 14,822,710 were females; and it is on this basis that the rates for the year given in the following report have been calculated.

As the rate of growth in the past decennium was considerably less than it had been in the next preceding intercensal period, the estimates of population, based upon the hypothesis that this latter had been maintained, which have been used in the successive annual reports since 1881, have necessarily been in excess of the reality.

Had the rate of growth in 1871–81 been maintained, the population in the middle of 1890 would have amounted to 29,407,649, whereas the results of the recent census reduce the estimate to 28,762,287, showing an excess of the earlier over the later estimate of no less than 645,362. This excess, however, large as it is, is not large enough to cause any very material difference in the death-rates, as the following table shows, in which the death-rate for each year as calculated on the former estimate is put side by side with the death-rate as calculated on the new basis.

TABLE A.—DEATH-RATES as calculated on the EARLIER and LATER ESTIMATES of POPULATION, 1881–90.

Year.	Death-rate per 1000.		Difference.
	By former Estimates.	By new Estimates.	
1881	18·88	18·89	0·01
1882	19·56	19·62	0·06
1883	19·54	19·64	0·10
1884	19·51	19·66	0·15
1885	19·01	19·21	0·20
1886	19·28	19·52	0·24
1887	18·79	19·07	0·28
1888	17·80	18·11	0·31
1889	17·87	18·22	0·35
1890	19·12	19·55	0·43
Decennial Mean	18·94	19·15	0·21

It appears, then, that the death-rates for England and Wales, as published in the successive annual reports since 1880, have never differed from the rates as calculated on the new basis of population by more than 0·35 per 1000, or by about one death in 3000 persons; a difference so insignificant, that for all practical purposes it may be disregarded.

The same is, however, by no means the case with areas of smaller extent, in which the growth is much less equable than in the aggregate country. Here, for instance, are the death-rates for several counties in 1889 as published in the last annual report, and as now recalculated from the new population figures.

TABLE B.—DEATH-RATES per 1000 in 1889.

County.	As published.	As recalculated.
Essex - - - -	16·2	14·8
Cornwall - - - -	18·4	17·3
Lancashire - - - -	21·0	22·3
East Riding - - - -	18·9	19·9
North Riding - - - -	16·6	18·0
Monmouthshire - - -	20·3	18·6

When enumerations are only made at decennial intervals, such differences are unavoidable.

In this report all rates given, whether for the aggregate country or for the individual counties, have been recalculated on the new population figures; it being assumed that the growth has been equable throughout the decennium.

MARRIAGES.

The number of marriages registered in the year was 223,028, and corresponded to a rate of 15·5 persons married per 1000 living. In 1886 the rate was only 14·2, and the lowest since civil registration was instituted, but from that year it rose continuously, year by year, until in 1890 it reached the same point as in 1882 and 1883, that point being higher than in any other year since 1877 (Table 2). If, therefore, the

marriage-rate be an index of prosperity, the condition of the country has been improving for four successive years.

Simultaneously with the rise in 1890 in the marriage-rate, there was a rise in the value of British exports, a rise in the average price of wheat, and a rise in the amount cleared at the Bankers' Clearing House, as the following table shows:

TABLE C.—MARRIAGE-RATE, BRITISH EXPORTS and IMPORTS, PRICE of WHEAT, and amount cleared at the London Bankers' Clearing House, 1860–90.*

YEARS.	Marriage-rate.	Value per Head of Population of United Kingdom.			Average Price of Wheat per Quarter.	Amount cleared at the Bankers' Clearing House per Head of Population.

1889	15·0	6 13 11	11 10 0	19 19 9	29 9	268
1890	15·5	7 0 7	11 4 5	19 19 7	31 11	271

* The figures in the marriage-rate column are not strictly comparable with those in the value columns, inasmuch as the former relate only to England and Wales, while the latter relate to the whole of the United Kingdom. The figures relating to exports and imports and to the price of wheat are derived from the Board of Trade Statistical Abstracts; and those showing the amount cleared at the London Bankers' Clearing House are calculated upon the population of England and Wales, and are derived from the same source.

Forms of Marriage.—Of the 223,028 marriages contracted in the year, 156,371, or 701 per 1000, were celebrated according to the rites of the Established Church, and 66,657, or 299 per 1000, otherwise. In the immediately preceding year, 1889, the proportions had been respectively 698 and 302; and though the differences between the two years' figures are but small, they are worthy of notice, because only on three previous occasions (1854, 1871, and 1885) had the continuous decline in the proportion of church marriages been broken by an alteration in the opposite direction (Table 5). The proportion of Roman Catholic marriages also slightly rose, namely from 42 per 1000 in both 1888 and 1889 to 43 per 1000 in 1890; while the marriages of the other Christian denominations, the marriages of Jews, and the civil marriages in Superintendent Registrars' offices showed slight fallings off in their proportions.

Among the Church marriages there is a manifest tendency to increase in the proportion of those that are celebrated after publication of banns.

For while the proportion in 1880 was only 870 per 1000, it has risen gradually year by year until in 1889 it was 906, and 909 in 1890.

First marriages; Re-marriages.—It will be seen in Table 7 that of 1000 men married in 1890, 885 were bachelors, and 115 were widowers; while of 1000 women who married, 919 were spinsters and 81 were widows. The number of persons married in 1890 who were described in the register as having been previously divorced, and who are included in the above proportions among the bachelors and the spinsters, was 181, including 87 men and 94 women. This total exceeded that recorded in any of the five preceding years, in which the numbers had been respectively 170, 163, 173, 178, and 150. Of the 87 divorced men, 76 married spinsters, 8 married widows, and 3 married divorced women. Of the 94 divorced women, 64 married bachelors, 27 married widowers, and 3 married divorced men.

Ages at Marriage.—In 7,455, or 3·3 per cent., of the marriages, the ages of both contracting parties were not inserted in the register. The mean ages of the remaining 215,573 couples, whose ages were stated, were 28·32 years for the men and 26·03 years for the women. The mean age of the bachelors was 26·38, of the widowers 44·23, of the spinsters 24·81, and of the widows 40·52 years, the age being in each class the highest as yet recorded, showing that there is an increasing tendency to defer marriage. Evidence of the same fact is given by the decline in the proportion of marriages of boys and girls under 21 years of age, the proportion of the former having fallen from a decennial average (1880–89) of 70 per 1000 to 60 per 1000, and of the latter from 210 to 195 per 1000. The counties in which the proportions of bridegrooms under 21 years of age were the highest in 1890 were Northamptonshire, Bedfordshire, Leicestershire, and Nottinghamshire, and these same four counties also head the list when the average proportions in the preceding ten years are examined. (Table 8).

Signature in Marriage Register.—The men who in 1890 signed the marriage register with marks instead of writing their names were 72 in 1000, while the women were 83 in 1000. In 24 out of 1000 marriages both bridegroom and bride used that form of signature. With the progress of elementary education there has been a continuous diminution in the proportions of both men and women signing with marks; and in 1890 the proportions, as compared with those for 1889, showed a reduction of 7·7 per cent. for men and of 7·8 per cent. for women.

Buildings registered for the Solemnisation of Marriages.—At the end of 1890 there were 15,004 churches or chapels belonging to the Established Church in which marriages could be solemnised, showing an increase of 38 upon the number at the end of the preceding year. There were also 10,553 buildings registered for marriage by other rites than those of the Established Church, showing an increase of 218, or 2·1 per cent., upon the number on the register at the end of 1889. (Table 9).

Certified Places of Worship.—During the year 1890, 568 new buildings were certified for religious worship under the provisions of the Acts 15 & 16 Vict. c. 36, and 18 & 19 Vict. c. 81, while 116 buildings already certified were removed from the register by cancellation; the number of buildings so certified on the register at the end of the year was 26,885. It is probable, however, that some of these are no longer used, though no steps have been taken to remove them from the register by cancellation.

Births.

The births registered in the year numbered 869,937, and were in the proportion of 30·2 to 1000 persons living. This is the lowest birth-rate recorded in any of the last 50 years, and a further step in the decline which has gone on continuously since 1876, when the rate was 36·3, and at its maximum. (Table 2.)

In registration counties the rate varied from 23·4 in Rutlandshire, 24·5 in Sussex, 25·4 in Dorsetshire, and 25·7 in North Wales, to 33·0 in Northumberland, 34·0 in Monmouthshire, 34·6 in Staffordshire, and 36·5 in Durham, being as usual highest in the mining counties and lowest in the agricultural counties. (Table 10.)

Sex.—The male births numbered 442,070, and the female births 427,867, the former being to the latter in the proportion of 1033 to 1000, the proportion in the preceding decennium having been 1038 to 1000.

Illegitimate Births.—The infants registered as born out of wedlock numbered 38,412, and were in the proportion of 46 to 1000 births, and 1·3 to 1000 persons living, this latter being the lowest proportion as yet recorded (Table 2). The registration counties in which the proportions of illegitimate to total births were highest were, as usually, Norfolk, Herefordshire, Shropshire, Cumberland, Westmorland, and North Wales. (Table 10.)

Deaths.

The deaths registered in 1890 numbered 562,248, and were in the proportion of 19·5 to 1000 of the population. This was considerably higher than the rate in any of the three preceding years 1887–8–9, in which it had been successively 19·1, 18·1, and 18·2. It was, however, still a low rate, as compared with most earlier years; and it is to be noted that in no one of the ten consecutive years 1881–90, did the rate rise to 20·0 per 1000, whereas in no year previous to those ten had it ever fallen so low (Table 2). The average rate in these ten years was only 19·14 per 1000.

Among the registration counties the lowest rates, in no case as high as 16·0 per 1000, were in Surrey (extra-met.), Sussex, Berkshire, Dorsetshire, and Westmorland, while the highest, in no case under 20·0 per 1000, were in Monmouthshire 20·0, Warwickshire 20·1, Staffordshire 20·3, Northumberland 20·5, Durham 20·5, London 21·0, West Riding 21·1, and Lancashire 23·4. This geographical distribution of low and high rates is much the same as in previous years; the higher rates being in the industrial, and the lower rates in the rural, counties. (Table 10.)

Sex.—The 562,248 deaths included 290,448 of males and 271,800 of females. The death-rate of males was 20·8, and that of females 18·3 per 1000 living of the corresponding sex.

Out of equal numbers living there were 1136 deaths of males to 1000 deaths of females, the difference being greater than in any year since 1877. The conditions of life in recent years appear to have become increasingly unfavourable to males as compared with females, for while, out of equal numbers living, the male deaths in no year before 1863 reached 1100 to 1000 female deaths, since that year they have never once failed to exceed that proportion. (Table 2.)

Ages at Death.—The year 1890 was remarkable for the excessive mortality among persons in the advanced stage of life. The death-rates both of men and of women from 45 to 55, from 55 to 65, and from 65 to 75 years of age were each either the highest on record (Tables 11 and 12), or the highest with some insignificant exceptions. The death-rates also in the decennial periods on either side of the above-mentioned thirty years, namely, among those who were from 35 to 45, and from 75 to 85, years of age were considerably above the average, while this was not the case in either sex with those who were under 35 years of age. The year, like the year 1875, was clearly a bad one for those who had passed the middle point of life, and especially for those among them who were of the male sex.

The proportion of deaths of infants in the first year of life to registered births, or the infantile mortality, was 151 per 1000, the proportion in the preceding ten years having been 142. The proportions varied in registration counties from 87 in Rutlandshire, 95 in Dorsetshire, and 98 in Wiltshire, to 162 in Leicestershire and in West Riding, 163 in London, 164 in Warwickshire, 166 in Staffordshire, and 174 in Lancashire.

Of the 130,955 infants who died in the first year of life, 62,356 were under three months of age, 26,800 between three and six months, and 41,799 over six months. The mortality, as is invariably the case, was much higher among the male than among the female infants; and the differences between the two sexes in this respect were the greater the younger the infants. This is shown in the following table, in which the annual death-rates of infants under three months, between three and six months, and from six to twelve months, are shown for each sex.

TABLE D.—ANNUAL DEATHS per 1000 living at each Age, 1890.

Age.	Males.	Females.	Male Infant Mortality to Female, taken as 1000.
0—3 months -	333	261	1,276
3—6 months -	147	122	1,205
6—12 months -	120	100	1,200
0—1 year - -	204	164	1,244

It will be noted that in both sexes the mortality is higher as the infants are younger; that at each age the male mortality is much higher than the female mortality; and lastly, that while in the first three months the male rate exceeds the female by 28 per cent., in the remaining nine months the excess is scarcely more than 20 per cent.

Urban and Rural mortality.—The increased mortality in 1890 was shared by both the urban and the rural populations, but affected the former in larger proportion than the latter. For while the death-rate in the Urban Districts rose to 20·9, from 19·0 and 19·3 in the two next preceding years, the rate in the Rural Districts rose only from 16·6 and 16·4 to 17·4. Thus out of equal numbers living, there died in 1890 in the Urban Districts 120 persons to 100 in the Rural Districts, while the proportions had been 114 and 118 in the preceding two years. (Table 24.)

Registered Causes of Death.

The deaths, when distributed to the several classes by their assigned causes, gave the rates shown in the following table:—

Table E.—Mortality from the several Classes of Diseases.

Causes of Death.	Total Deaths 1890.	Rate per Million living.										
		1890.	1889.	1888.	1887.	1886.	1885.	1884.	1883.	1882.	1881.	Mean 1881–90.
Zymotic diseases -	73,094	2,541	2,456	2,133	2,702	2,679	2,531	3,116	2,651	3,096	2,659	2,656
Parasitic diseases -	702	24	24	25	30	36	30	39	39	36	39	32
Dietetic diseases -	2,342	81	67	63	64	61	60	58	66	68	65	65
Constitutional dis. -	97,030	3,374	3,223	3,166	3,213	3,370	3,310	3,431	3,425	3,406	3,328	3,325
Developmental dis. -	46,320	1,611	1,550	1,569	1,578	1,638	1,614	1,586	1,641	1,562	1,584	1,593
Local diseases -	298,107	10,364	9,394	9,643	9,867	10,040	10,007	9,618	9,943	9,617	9,351	9,785
Violence - - -	18,770	653	614	622	652	634	634	656	679	672	697	651
Ill-defined and not specified causes -	25,883	900	893	891	968	1,064	1,019	1,160	1,198	1,162	1,164	1,042
All causes -	562,248	19,548	18,221	18,112	19,074	19,522	19,205	19,664	19,642	19,619	18,887	19,149

Zymotic or Specific Febrile Diseases.—The deaths ascribed to these diseases numbered 73,094, and were in the proportion of 2541 to a million persons living; this rate being somewhat higher than those recorded in either of the two next preceding years, but nevertheless considerably below the decennial average.

The excess in 1890, as compared with the preceding year, was due to the prevalence of two diseases, whooping-cough and influenza. Under all the other headings in the class there was either a decrease or a practically stationary condition.

The deaths from *small-pox* were only 16, having been 23 in 1889; and each of these numbers was less than one tenth of the smallest number registered in any preceding year. There were also 83 and 95 deaths in the two years attributed to chicken-pox, and it is possible that some of these may have been mistaken cases of small-pox. This, however, will not in any degree account for the great falling off in the deaths ascribed to small-pox; for in each previous year since 1874 there had been practically as many, and in most years even more, deaths ascribed to chicken-pox.

The deaths from *measles* numbered 12,614, and were in the proportion of 439 per million living. This proportion was somewhat lower than that recorded in the immediately preceding year, but practically tallied with the average rate in the current decennium. Measles is a disease on which sanitary measures have apparently had little, if any, effect; for the average annual mortality from it in the past quinquennium was as high almost as in 1858–60, and somewhat higher than in any of the intervening quinquennia (Table 17). In 1890 this disease, though not more than usually destructive in the aggregate country, was excessively prevalent in some parts, and the figures for counties in Table 23 (page l) together with those for districts (pages 170–192), show that among the areas thus seriously affected were London, with West Ham, Middlesex, and Hertfordshire; South Lancashire, Cheshire, and the contiguous part of North Staffordshire; the districts in Nottinghamshire and Derbyshire that lie in the angle between the Trent and the Derwent, with the contiguous districts in the West Riding; and in the south-west of England, the part

of Cornwall comprised in the districts of Truro, Redruth, Falmouth, and Helston.

The deaths from *scarlet fever* numbered 6,974, and were in the proportion of 242 per million persons living, a proportion practically identical with the average in the preceding quinquennium (Table 16). It is a notable fact that the mortality from this disease, which prior to 1885 had scarcely ever been less than 500 per million, and only once (1838) less than 400, fell suddenly to 233 per million, and has never again risen to as high a point as 300 per million. In 1890 the highest mortalities per million from this disease were in Lancashire 558, South Wales 501, West Riding 349, Durham 339, Cumberland 324, and Warwickshire 319; such mining and industrial counties, as were pointed out in a previous report (47th Annual Report, pages xiii–xiv), being specially afflicted by this disease.

The deaths from *enteric fever* numbered 5,146, and were in the proportion of 179 to a million persons living; a rate practically the same as those recorded in each of the two next preceding years. For six consecutive years, 1885–90, the rate of mortality from this disease has not exceeded 185 per million, whereas in no previous year was it once lower than 212.

Enteric fever was first distinguished from other continued fevers in the Annual Reports in 1869; and if we divide the years since that date into three periods, in the first period, from 1869 to 1876, the rate fluctuated from 390 to 309; in the second period, 1877 to 1884, from 306 to 212; and in the third period, from 1885 to 1890, from 185 to 172. Nor can this marked decline be ascribed to confusion between enteric fever and typhus or simple and ill-defined fevers, for the deaths classed under each of these headings have also rapidly declined, and in 1890 were at the minimum as yet reached.

But though there has been this great decrease in enteric fever in the aggregate country, there are parts of it in which the disease appears to be still unduly prevalent. Such, for instance, is the tract of ground that runs along the east side of Northumberland and Durham, from Morpeth on the north to Middlesbrough and Guisbrough on the south. In this space, which comprises eighteen Registration Districts, and had in the middle of 1890 a population estimated as 1,524,549, there were in that year no fewer than 601 deaths from enteric fever, giving a rate of 394 per million living, which was not only much more than twice the rate for all England and Wales, but was almost twice as high as the rate in the twenty-eight great towns included in the Weekly Return, and indeed higher than the rate in any one of these twenty-eight towns, with the single exception of Salford. Moreover, examination of the Annual Reports for the three previous years, 1887–8–9, shows that in a large proportion of these eighteen districts there had been in those years also excessive enteric fever mortality.

The deaths ascribed to *diphtheria* numbered 5150, and were in the proportion of 179 to a million persons living, a proportion somewhat lower than that recorded in 1889, but nevertheless above the average of recent years. (Tables 16 and 17.) There was excess of mortality from this disease in Salford and in parts of Monmouthshire and of Wiltshire, but the places in which it was most fatal were, as usual, chiefly in the South East; and, among the areas thus affected, the most important was London, with the adjoining parts of Middlesex, Essex, Surrey, and Kent. There were also outbreaks in Eastbourne and in Hastings, among the Sussex districts, in Tendring in Essex, in Ipswich in Suffolk, in Bishop Stortford in Hertfordshire, in Bedford and Biggleswade in Bedfordshire, in Wokingham and Cookham in Berkshire, and in Farnham in Surrey, all being situated in what was termed in a previous report (47th Annual Report, page xiii) the South-Eastern Diphtheritic Region.

The deaths from *whooping-cough*, 13,756 in number, were in the proportion of 478 to a million persons living, a higher proportion than in any other year of the decennium with the exceptions of 1882 and 1885, when the proportions were respectively 579 and 481 per million. (Table 16). Among the areas in which this disease appears to have been most destructive were Cornwall with Devonshire; Monmouthshire with Glamorganshire, and the adjoining parts of Brecknockshire and Gloucestershire; and London with Middlesex, Essex, Cambridgeshire, and Huntingdonshire.

Influenza.—The year 1890 was marked by a visitation of this country by epidemic influenza. Every year there are some few deaths ascribed to influenza; but the vagueness with which the term is often employed, and the absence of any very constant pathological feature even in the undoubted cases of this disease, give fair grounds for doubting whether the influenza deaths of ordinary years are of the same nature and due to the same cause as are the deaths in the epidemic periods, and whether they should not have been classed either under Pneumonia or Bronchitis, rather than under the more specific designation.

If, however, there be in ordinary years a transference of deaths from diseases of the respiratory organs to influenza, there is most assuredly in epidemic years a very much greater transference in the contrary direction, a large proportion of the deaths due to the epidemic influence being registered, not under Influenza, but under such headings as Bronchitis, Pneumonia, and the like. For an indisputable epidemic of influenza is almost invariably accompanied, not only by a notable increase of mortality under that heading itself, but also by notable increases under these other headings.

Under these circumstances, it is plain that too much reliance must not be placed upon the official returns of influenza mortality. In the years of epidemics such mortality will be much understated, while the contrary will probably be the case in non-epidemic periods. A careful examination of the figures leaves, however, no reasonable doubt that epidemic influenza was really prevalent in this country in 1841, 1847–8–9, 1851, 1853, and 1858; while the mortality figures for the series of years since this last date give no certain evidence of the existence of an epidemic of this disease, until we reach 1890, that is for more than thirty years.

The outbreak of 1890 began in reality near the close of the preceding year, the disease having apparently made its way into our ports from the Continent, and diffused itself rapidly over the country. It was, however, not until January that the epidemic was thoroughly established. In London it began to subside before the close of that month, and though both its maximum and its subsidence were somewhat later in most other parts of the country, it may be said—disregarding some few exceptional districts—to have come to an end before the close of the quarter.

The total number of deaths directly ascribed to influenza in the year was only 4523, or 157 per million living; but there can be no doubt that the deaths really caused by this disease were far more numerous, for concomitantly with the epidemic there was an enormous rise in the mortality under other headings, and especially under pneumonia and bronchitis; rises which could not be explained by the usual cause of increase under these headings, viz., cold weather, inasmuch as the temperature in the month of January, when the epidemic in London was at its worst, was 6°·8 Fahr., and that of the whole quarter 2°·5 Fahr., above the average.

If we assume—as we may, though not with certainty, yet with much probability—that the increased mortality from pneumonia, bronchitis, and diseases of the organs of circulation, as compared with the average of the nine preceding years of the decennium, was due to the same cause as were the deaths directly ascribed to influenza, the total number of deaths due

directly or indirectly to the epidemic influenza was not merely 4523 but 27,074, or 941 per million living.

The deaths from *diarrhœal affections* numbered 17,837, or 620 per million living. This rate was somewhat below the average, doubtlessly in consequence of the cold weather in July and August, in which months the temperature was 2°·2 F. and 1°·6 F., respectively, below the average.

Hydrophobia.—The deaths from this disease, which had been 30 in the preceding year, 1889, and had averaged 24 annually in the three years 1887–8–9, were only eight in 1890, and fewer than in any year since 1868. This notable decrease was coincident with, and doubtlessly due to, a similar decline in canine rabies; the number of dogs returned to the Board of Agriculture as afflicted by this disease having fallen from 312 in 1889, and an average of 230 in the three years 1887–8–9, to 129 in 1890; and it seems impossible not to associate this remarkable decline with the application of the Muzzling Order by the Board of Agriculture, from 1st January 1890, to those counties in which rabies was known to have been prevalent. These were the counties in which, as was shown in a previous report (51st Annual Report, pages xiii–xv), hydrophobia has been most common, namely, the groups of counties of which London and Lancashire are respectively the centres.

Of the 8 deaths from hydrophobia in 1890, 3 occurred in the West Riding, 2 in Lancashire, 2 in London, and 1 in Dorsetshire.

Puerperal Fever.—The deaths ascribed to this cause were 1956, and, adding to these 2299 deaths from the accidents of childbirth, we have a total of 4255 deaths directly ascribed to parturition. This was in the proportion of 4·89 to 1000 registered births, a rate somewhat above the average in the preceding decennium, which had been 4·64. Concomitantly with the increase under puerperal fever, there was, as almost invariably is the case, an increase under erysipelas.

Dietetic Diseases.—The chief heading in this class is intemperance. The deaths attributed to this cause have increased year by year since 1884, and in 1890 were both absolutely and relatively to the population more numerous than in any previous year. They numbered 2037, and were in the proportion of 70 to a million living, the highest previous rate having been 55, and this in the next preceding year, 1889. In addition to the 2037 deaths directly ascribed to intemperance, there were 218 others among the deaths from accident in which it was stated that the deceased was drunk or suffering from delirium tremens when the accident occurred. Of these 218 deaths, 136 were of men and 82 of women (pages 196 and 199).

Constitutional Diseases.—The deaths in this class numbered 97,030, being in the proportion of 3374 to a million persons living; a rate which, though lower than the decennial average, was considerably higher than the rate recorded in any of the three next preceding years, 1887–8–9.

The increase was partly due to further advances in the mortality from cancer and from diabetes; the rate from each of these steadily increasing diseases in 1890 having been the highest on record; but the main part of the increase in the class was under the headings Phthisis and Other Tubercular Diseases, the mortality under these two headings together having risen from 2283, 2221, and 2258 per million in 1887, 1888, and 1889, to 2376 in 1890. This sudden interruption in the almost unbroken decrease which had been shown by these diseases for a long series of years requires some explanation; and the most probable interpretation is that a number of weakly persons of phthisical constitution, who might otherwise have continued to live for some years, were carried off prematurely by the influenza epidemic

of the first quarter of the year. This explanation is supported by the fact that in London, as is shown by the Weekly Returns, the deaths from phthisis were in great excess during the whole prevalence of the epidemic, and fell to their usual level when the epidemic subsided.

Developmental Diseases.—The mortality under the heading Old Age, which had been declining pretty steadily for some years, again rose in 1890; not improbably from the same cause as was suggested above in the case of phthisis. The deaths also ascribed to *premature birth*, which, as has been pointed out in previous reports, have been for a long series of years becoming more and more numerous in proportion to the registered births, showed a further increase in 1890, having risen progressively from 11·19 per 1000 births in 1861–5 to 16·29 in 1889, and 17·48 in 1890.

Local Diseases.—The deaths in this very large and very heterogeneous class numbered 298,107, and were in the proportion of 10,364 per million living. This rate was not only considerably above the decennial average, but higher than in any other year of the decennium.

The increase was almost entirely under two headings, Diseases of the Organs of Circulation, and Diseases of the Respiratory System. The deaths under the former of these two headings were 1757 per million living, the average rate in the preceding five years having been only 1,657, and the highest rate in any year 1695 per million.

The deaths from diseases of the organs of respiration were 4120 per million living, against an average of 3563 per million in the preceding quinquennium, and more numerous in proportion to the population than in any year in the table (Table 16), with the exceptions of 1875 and 1879.

The great rise in the mortality under these two headings in London during the period when influenza was epidemic makes it highly probable that at any rate a very large share in the increased mortality under them in the whole country was in reality determined by that epidemic; persons who were weakened by an attack of influenza falling easy victims to other incidental maladies.

Violence.—The deaths ascribed to some or other form of violence numbered 18,770, or 653 per million living, a ratio somewhat in excess of the average in the previous five years, which was 631.

This slight excess was due to an increase under *accident and negligence*, the mortality both from *homicide* and from *suicide* being below the average. The deaths from accident and negligence numbered 16,263, and of these 11,600 were of males, and only 4663 of females.

Among the headings under which these deaths are grouped is one in which negligence has more than an average share, namely, suffocation in bed. In the course of the year no fewer than 1544 children, almost all infants in the first year of life, were certified as having died from this cause. This was a larger number than in any preceding year; and, indeed, it appears that the mortality under this heading has been slowly increasing for the past five years, as the following table shows.

TABLE F.—DEATHS of INFANTS from SUFFOCATION IN BED to 100,000 BIRTHS.

Year.	Deaths per 100,000 Births.	Year.	Deaths per 100,000 Births.
1881	130	1886	136
1882	130	1887	141
1883	129	1888	155
1884	125	1889	157
1885	124	1890	174

It will be well therefore to subject these deaths to more minute examination.

The first thing to be noted is that the younger the infant the greater the chance of its suffocation; probably because the very young infant succumbs more easily, and because there is more uninterrupted contact with its mother's body. Thus of the 1517 infants under one year of age who thus died in 1890, 354 were in the first month of life, the average for the remaining eleven months being only 106 per month of life.

Secondly, the accident is more frequent in winter than in summer, doubtlessly owing to the heaping up of bed clothes in the colder weather. Comparing the six winter months with the six warmer months of the year, 60 per cent. of the deaths are registered in the former, and only 40 per cent. in the latter period.

But the point of most interest as regards these deaths from overlying of infants is their distribution over the days, or rather the nights, of the week. An examination of a large number of deaths of infants, concerning which inquests had been held, and the cause and day of death stated in the coroner's certificate, has yielded the results given in the following table, in which the first column of figures relates to the deaths from suffocation in bed.

TABLE G.—DISTRIBUTION over the WEEK, of DEATHS of INFANTS on which INQUESTS have been held.

Day of Week.	Proportions per 1000.	
	Suffocation in Bed.	Other Causes.
Sunday	283	180
Monday	124	132
Tuesday	137	145
Wednesday	116	139
Thursday	115	136
Friday	107	128
Saturday	118	140
	1,000	1,000

Note.—This Table is based on 2020 inquest cases in various parts of the country; in 767 of which cases the cause of death was returned as suffocation in bed.

In interpreting this table, it must be held in mind that the deaths from overlying on any given night will be referred to the day succeeding that night. Thus a woman going to bed with her infant on, say, Saturday night, if she finds on waking the next morning that the infant is dead, will describe the death, of which the precise hour is unknown, as having happened on Sunday morning; and so with the other days.

Remembering this, it will be noted that the proportion of deaths of infants from overlying is more than twice as high on Saturday night as on any other night in the week. The next highest proportion is on Monday night, and after this on Sunday. Through Tuesday, Wednesday, and Thursday nights there is a gradual decline, followed by a slight but distinct rise in the proportion on Friday night.

Now there is one explanation, and as far as can be seen only one, of this curious distribution, and that explanation is that it is determined by differences in the amount of intoxication on different days of the week. Saturday afternoon is the most general holiday and pay day, and is also a day on which public-houses are in full activity. Monday is also in some

places a workman's holiday and a day when public-houses are fully open, and on Monday the wages of Saturday are as yet probably not exhausted. This last condition will also apply to Sunday, which also is a non-working day; but on Sunday the public-houses are partially closed, and the facilities of obtaining drink diminished; so that the smaller proportion of deaths on the night of that day, as compared with Monday night, finds a probable explanation. Monday night passed, begins the real working part of the week, and the infantile deaths fall off in number, the proportion getting less and less as the week's money is gradually exhausted, until on Friday night there is again a slight rise, probably determined by that day being also, in some industries and places, a pay-day. Such seems the only explanation that can be suggested for the distribution of the deaths from overlying; but if this explanation be the true one, it can scarcely be doubted that a similar interpretation must be put upon the very similar distribution of infantile deaths from other causes than overlying, as shown in the second column of figures in Table G, which gives the daily distribution of deaths of infants concerning which inquests have been held but other verdicts found than "suffocation in bed"; these other verdicts being to a very large extent such unsatisfactory findings as "natural causes," "convulsions," and the like. It is impossible to believe that an infant is more likely to die, *cæteris paribus*, on one day of the week than another from "natural causes" or from "convulsions," and the suggestion now offered is that these findings by juries are to a large extent mere aliases for the overlying of an infant, or neglect of its requirements, by a drunken parent.

Ill-defined and Unspecified Causes.—In 25,883 cases, or 4·6 per cent. of the total deaths, the cause of death was so inadequately stated that the death had to be referred to this class; the proportion was slightly less than in the immediately preceding years 1888 and 1889, in each of which it had been 4·9. The decline was doubtlessly in part due to the 3768 letters of inquiry concerning doubtful cases (against 3175 such letters in the previous year) which were sent to medical men. The result of this process was to transfer a large number of cases from ill-defined to definite headings. Thus, for instance, 522 deaths were removed from more or less vague headings, mainly "Tumour," to Cancer or Malignant Disease, and 48 to Syphilis.

Certification of Causes of Death.—Of the 562,248 deaths registered during the year 1890, the causes of 514,720, or of 91·6 per cent., were certified by registered medical practitioners; and the causes of 31,581, or of 5·6 per cent., were certified by coroners after inquest, while the causes of the remaining 15,947 deaths, or of 2·8 per cent., were not certified. The per-centage of inquest cases was the same as it had been in 1889, while that of uncertified deaths showed a further step in the progressive decline which has been noted in previous reports. The 15,947 uncertified cases in 1890 included deaths of infants who had been attended only by midwives, and of persons attended by unregistered practitioners, as well as of persons who had no medical attendance of any kind in their last illness. The lowest proportions per cent. of uncertified deaths in registration counties were 0·6 in extra-metropolitan Middlesex, 0·9 in London and in Wiltshire, and 1·0 in extra-Metropolitan Surrey; while the highest were 4·1 in Derbyshire and in Monmouthshire, 4·7 in Durham, 5·0 in Herefordshire, 5·5 in South Wales, 6·0 in Huntingdonshire, and 6·4 in North Wales. The unusually high proportion in Monmouthshire was due to a colliery explosion which caused a large number of deaths, inquests having been held only on a few of the bodies, while the remainder were registered uncertified. In other counties the proportions did not materially differ from those recorded in 1889.

Offences against the Registration Act of 1874.—In the course of the year 19 prosecutions for offences against this Act were instituted by me, and in each case the prosecution was successful. In 10 of these cases the offence consisted in false statements as to the legitimacy of a child; in 3 others, in false statements as to a woman being married who was really unmarried; in one, in neglect to register a birth after notice to do so; in 2 cases, in the giving of false certificates of death by unregistered medical men; in one, in giving a false certificate of stillbirth by a registered medical man; in one, in using a forged certificate of cause of death; and in one, in permitting a child to be buried as stillborn without a certificate that such was the case. In addition to these 19 cases, a man was prosecuted by the Treasury at my instance, under the Act 19 & 20 Vict. c. 119., s. 18, and convicted of making a false declaration on giving notice of marriage.

Progress of Registration.

The names in the alphabetical indexes of births, deaths, and marriages recorded in the national register of England and Wales were increased in the year 1890 by 1,878,241, this addition raising the aggregate number of names in the indexes, which at the end of 1890 embraced a period of 53½ years, to 81,264,504. The number of searches in 1890 in the various registers was 43,874, exceeding the number in the previous year by 2872. The number of certificates issued was 31,686, showing an increase of 1195 on the number in 1889. The fees received for searches and certificates in 1890 and paid into Her Majesty's Exchequer amounted to 6,178*l.* 4*s.* 0*d.*, exceeding the amount received in the previous year by 294*l.* 1*s.* 6*d.* (Table 26.)

A list of the various public registers and records lodged in the General Register Office, Somerset House, was published in the 34th Annual Report, pages xxi–xxii.

Mortality in the Army.*

The average strength of the Army, at home and abroad, was 209,221, and the deaths were 1813, the rate of mortality thus being 8·7 per 1000, against 9·7 and 9·3 respectively in the preceding two years. The mortality in the army abroad was 11·4 per 1000, the mean rate in the preceding five years having been 15·8; while the rate in the Army at home was 6·0, a rate 1·0 per 1000 higher than that in 1889, but 0·5 below the mean rate in the five years 1885–89, such mean rate itself having shown a considerable decline from the mean rates in previous quinquennia. (Table 29.)

Mortality in the Navy.†

The average force afloat in 1890 was 53,350. The deaths were 456, being in the ratio of 8·54 per 1000 of the strength. Of the 456 deaths, 220 were due to disease, and 236 to violence; so that the death-rate from disease was 4·12, and that from violence 4·42 per 1000.

Of the 236 deaths from violence, 208 resulted from accidental drowning (including 173 in consequence of the wreck of the "Serpent"), 24 from other accidental causes, and 4 from suicide.

* Based upon returns furnished by His Royal Highness the Commander-in-Chief.

† Based upon returns furnished by the Director-General of the Medical Department of the Navy.

Births and Deaths of British Subjects at Sea.

Marine Register Book.—In accordance with the Births and Deaths Registration Act of 1874, commanding officers of British ships, whether in Her Majesty's service or not, are required, under a penalty, to transmit returns of all births and deaths occurring on board their ships to the Registrar-General of Shipping and Seamen, who furnishes certified copies of such returns to the Registrars-General of England, Scotland, and Ireland. These certified copies of entries of births and deaths at sea constitute the "Marine Register Book." To this Register were added 186 entries of births and 3573 of deaths during the year 1890. Of these 3573 deaths, so far as could be judged from the entries, which are not always very precise, 1684 were of persons of English origin, while 452 others were of persons of British origin.

Mercantile Marine.—The Registrar-General of Shipping and Seamen reports that the number of masters and seamen afloat in registered vessels belonging to the mercantile marine of the United Kingdom, including the islands in the British Seas, during the year 1890 was 236,108, showing an increase of 5845 upon the number in the preceding year. The reported deaths among masters and seamen during 1890 numbered 3305, corresponding to an annual rate of 14·0 per 1000 of the strength; this was 0·9 per 1000 higher than the rate in the previous year, but was 1·2 per 1000 below the mean rate in the five years 1885–89. (Table 31.)

Among *passengers* on board merchant vessels at sea (Table 32), 108 births and 515 deaths were reported in 1890, the births being below and the deaths slightly above those recorded in the preceding year.

International Vital Statistics.

In Tables 39–56 will be found international vital statistics relating to most of the principal European States. As the sex and age distribution of the population differs greatly in different countries, and as the rates largely depend upon such distribution, as has been repeatedly pointed out in previous reports, the rates in one country cannot be safely compared with the rates in another, without correction.

In order to allow fair comparison, it is most desirable that the various countries should agree upon some standard population, that is a population with fixed sex and age distribution, for international use; and should calculate their birth, marriage, and death rates by such standard.

The most noticeable point in these international tables is the universal rise in the death rate. In every country from which returns were received, the mortality in 1890 was higher, and in most cases very considerably higher, than it had been in the preceding year. The explanation of this universal increase is doubtlessly to be found in the very general prevalence throughout Europe of epidemic influenza.

I have the honour to be,
Sir,
Your faithful Servant,
BRYDGES P. HENNIKER,
Registrar-General.

General Register Office, Somerset House,
26th November 1891.

Remarks on the Meteorology of the Year 1890.*

By James Glaisher, Esq., F.R.S., &c.

The following remarks, both with regard to atmospheric pressure and temperature, are based on observations made near London, but they may be taken as having a general application.

Atmospheric Pressure.—The reading of the barometer was generally above the average till the 17th of January, the mean daily excess for these 17 days being 0·16 in.; from January 18th to the 28th it was below, being particularly so on the 22nd and 23rd, when it was as much as 0·77 in. and 1·18 in. respectively below its average, the mean daily deficiency for these 11 days being 0·38 in.; from January 29th to February 11th it was above, the mean daily excess being 0·32 in.; from February 12th to the 17th it was below, particularly so on the 15th, when it was 0·54 in. below its average; the mean daily deficiency for the 6 days ending February 17th being 0·23 in.; from February 18th to March 4th it was generally above, being particularly so on the 23rd and 24th of February when it was as much as 0·67 in. and 0·57 in. respectively above its average; the mean daily excess for the 15 days ending March 4th being 0·30 in.; from March 5th to the 26th it was below, being particularly so on the 8th, 16th, 17th, 18th, 19th, 20th, 24th, and 25th days, the mean daily deficiency for these 8 days being 0·61 in., and the mean daily deficiency for the 22 days ending March 26th was 0·33 in.; from March 27th to April 5th it was above, the mean daily excess being 0·17 in.; from April 6th to May 20th it was generally below, being particularly so on the 15th, 16th, and 25th days of April, when it was as much as 0·53 in., 0·52 in., and 0·60 in. respectively below its average, the mean daily deficiency for the 45 days ending May 20th being 0·18 in.; from May 21 to June 25th it was generally above, the mean daily excess being 0·10 in.; from June 26th to July 19th it was generally below, being particularly so on the last day of June and first day of July, when it was as much as 0·69 in. and 0·68 in. respectively below its average; the mean daily deficiency for the 24 days ending July 19th being 0·19 in.; from July 20th to August 9th it was generally above, the mean daily excess being 0·12 in.; from August 10th to the 29th it was generally below, being particularly so on the 26th and 27th days when it was as much as 0·51 in. and 0·62 in. respectively below its average; the mean daily deficiency for the 20 days ending August 29th being 0·21 in.; from August 30th to September 15th it was above, the mean daily excess being 0·19 in.; from September 16th to the 22nd it was below, the mean daily deficiency being 0·15 in.; from September 23rd to October 30th it was generally above, being particularly so on the 26th and 27th of September, and the 9th, 10th, 12th, 22nd, and 23rd of October, the mean daily excess for these 7 days being 0·54 in.; and the mean daily excess for the 38 days ending October 30th, was 0·24 in.; from October 31st to November 13th it was below, being particularly so on the 2nd, 4th, and 7th of November, when it was as much as 0·70 in., 0·72 in., and 0·75 in. respectively below its average; the mean daily deficiency for the 14 days ending November 13th being 0·37 in.; from November 14th to December 14th it was generally above, being particularly so on the 17th, 19th, and 20th of November, when it was much as 0·50 in., 0·60 in., and 0·59 in. respectively above its average; the mean daily excess for the 31 days being 0·14 in.; from December 15th to 20th it was below, being as much as 0·73 in. below on the 19th; the mean daily deficiency for these 6 days being 0·29 in.; and from December 21st to the 31st it was above, the mean daily excess being 0·18 in.

* For Meteorological Tables, *see* pp. lvi–lxi.

The highest reading of the barometer at the height of 150 feet above the sea was 30·484 ins. on February 23rd, and the lowest was 28·522 ins. on January 23rd; the yearly range was 1·962 ins.

Temperature.—The temperature of the air was below its average till the 3rd of January, being particularly so on the 1st, when it was as much as 9°·7 below, the mean daily deficiency for these three days being 7°·0; from January 4th to February 2nd it was generally above, being particularly so on the 6th, 7th, 12th, 13th, 15th, 16th, and 25th of January, when it was as much as 13°·4, 12°·3, 10°·6, 10°·0, 10°·4, 10°·3, and 10°·7 respectively above its average, and on several other days it varied from 5° to 8½° above; the mean daily excess for the 30 days ending February 2nd, being 5°·8; from February 3rd to March 5th it was below, being particularly so from the 1st to the 4th of March, when it was 11°9, 15°·1, 16°·7, and 20°·0 respectively below its average, and on several other days the deficiency varied from 5° to 9¾°; the mean daily deficiency for the 31 days ending March 5th being 5°·2; from March 6th to the 17th it was above, the mean daily excess being 3°·0; from March 18th to the 21st it was below, the mean daily deficiency being 2°·4; from March 22nd to the 31st it was above, being particularly so on the 28th, when it was as much as 11°·7 above its average, the mean daily excess being 4°·4; from April 1st to the 28th it was below, the mean daily deficiency being 3°·3; from April 29th to May 25th it was generally above, the mean daily excess being 1°·7; from May 26th to September 14th it was generally below, being particularly so on the 5th, 6th, 11th, and 12th of July, and the 30th and 31st of August, the mean daily deficiency for these 6 days being 11°·3; and on several other days in June, July, and August it was as much as 8° and 9° below, the mean daily deficiency for the 116 days ending September 14th being 2°·8; from September 15th to October 7th it was generally above, the mean daily excess being 2°·8; from October 8th to the 29th it was below, being particularly so on the 27th and 28th, when it was as much as 10°·4 and 16°·1 respectively below its average; the mean daily deficiency for the 22 days ending October 29th being 3°·6; from October 30th to November 24th it was generally above, being particularly so on the 18th, 19th, and 23rd days, when it was as much as 10°·8, 11°, and 10°·9 respectively above its average, the mean daily excess for the 28 days being 2°·6; and from November 25th to December 31st it was below, being as much as 21°·4 below on November 28th, and 21°·0 below on December 22nd; and on other days it varied from 1°·9 below on the 4th of December, to 17°·7 below on the 14th of December, the mean daily deficiency for the 37 days ending December 31st being 11°·5.

The highest temperatures of the air were at Royston 83°·7, at the Royal Observatory 82°·8, and at Barnet 82°; and the lowest were 4°·3 at Royston, 6°·0 at Salisbury, and 8°·0 at Barnet and Oxford.

Rainfall.—The fall of rain was above its average in January; below in February; and above its average again in March. The total fall in the three months at Greenwich was 5·10 ins., or 0·13 in. above the average. The fall of rain was above its average in April, below in May, and above its average again in June. The total fall in the three months at Greenwich was 5·65 ins., or 0·14 in. below the average. The fall of rain was above its average in both July and August, and below in September. The total fall for the three months at Greenwich was 7·69 ins., or 0·39 in. above the average. The fall of rain in each of the months of October, November, and December was below its average. The total fall for the three months at Greenwich was 3·44 ins., or 3·65 ins., below the average.

The heaviest falls of rain in the year at our stations were 50·43 ins. at Stonyhurst, 45·10 ins. at Truro, and 36·19 ins. at Plymouth.

The least falls were at Nottingham 17·76 ins., at Oxford 18·41 ins., and at Royston 18·68 ins.

The greatest numbers of days of rain were at Truro 226, at Stonyhurst 223, and at Guernsey 221; and the smallest numbers of rainy days were at Oxford 135, at Barnet 143, and at Wolverhampton 148.

Thunderstorms occurred on 51 days at the different stations during the year; of these, 15 were in August, 9 in May, 8 in June, 4 in September, 3 in each of the months of January, April, July, and October, 2 in March, and one in November.

Thunder was heard but lightning was not seen on 53 days during the year; of these, 17 were in August, 10 in May, 7 in June, 5 in both April and July, 4 in March, 2 in both September and October, and 1 in January.

Lightning was seen but thunder was not heard on 34 days during the year; of these, 10 were in August, 6 in May, 5 in January, 2 in each of the months of April, June, July, September, October, and November, and 1 in February.

Solar halos were seen on 105 days during the year; of these, 16 were were in May, 14 in July, 13 in April, 12 in November, 10 in June, 9 in February, 8 in March, 7 in September, 6 in January, 5 in August, 4 in October, and one in December.

Lunar halos were seen on 38 days during the year; of these, 5 were in each of the months of May, October, and November, 4 in each of the months of January, September, and December, 3 in both February and March, 2 in both April and June, and one in August.

Snow fell on 67 days during the year; of these, 22 were in December, 10 in February, 9 in both January and March, 7 in November, 5 in April, 4 in October, and one in May; the last fall in the spring was on May 15th at Halifax; none fell in June, July, August, or September; and the first fall in the autumn was on the 18th at the Royal Observatory and Blackheath.

Hail fell on 74 days during the year; of these, 12 were in November, 11 in January, 10 in April, 8 in each of the months of March, August, and December, 5 in both February and October, 3 in both May and June, and one in July.

Fog prevailed on 172 days during the year; of these 22 were in both January and December; 20 in both February and September, 15 in both October and November, 14 in March, 12 in April, 11 in June, 9 in July, and 6 in both May and August.

PRELIMINARY TABLES.

TABLE 1.—**United Kingdom: Population** of its several **portions estimated** to the the **British Seas,** and of the **portions** of the **Army,**

* Deaths from Relapsing Fever prior to 1869 were classed with "Simple and Ill-defined Fever," and deaths from Cerebro-spinal Fever prior to 1877 were classed with Typhus, but, since those dates, have been included under this heading.

† Deaths of children under 5 years of age from Remittent Fever were classed with Enteric Fever from 1869 to 1880, but in previous and subsequent years have been included under this heading.

TABLE 15 (*continued*).—ENGLAND.—**Deaths from Various Causes, 1866-90.**

NOTE.—*Up to and including* 1886 masters were excluded from the above employment and mortality figures; the latter of which contained some cases of men who died in colonial vessels and fishing vessels not registered under the Merchant Shipping Acts, whose crews are not included in the employment column.
Since 1886 masters are included in both columns, and the employment and mortality figures relate only to persons employed in registered vessels belonging to the United Kingdom, the Isle of Man, and Channel Islands.

* The prices of Consols for the years 1840–52 relate to the 12 months beginning 1st April; from 1853 onwards the prices relate to calendar years. For the years 1840–88 the prices relate to stock bearing 3 per cent. interest, for 1889–90 to stock bearing 2¾ per cent.

† From the Board of Trade Statistical Abstract.

‡ The prices of coal are derived from Parliamentary Returns furnished by the Registrar of the London Coal Market, by order of the House of Commons.

§ Derived from Returns, published by the Local Government Board, of the number of persons in receipt of Relief on the last day of each week.

INTERNATIONAL VITAL STATISTICS.

NOTE.—An addition of territory containing a population of about 8000 was made in 1864, and the facts relating thereto are included in this Table from 1860. Previously to 1st January 1860, children who died within 24 hours after birth were counted as still-born.

* Census year.

† Cholera was epidemic in the year 1853, and war raged in the years 1850 and 1864.

NOTE.—The population in the four years 1862-65 and in the years 1867-69 is estimated by means of the average annual rate of increase observed between the two enumerations of 1861 and 1866. The deaths of Frenchmen abroad, civil or military, are registered in the books of the Commune in which they were last domiciled.

* Census year. † Cholera prevailed in 1865-66, and war raged in 1870 and 1871.

NOTE.—Statistics for the 7 years 1871-77 were not issued owing to the disturbed state of the country. The decline in registered marriages in 1870 is believed to be due to the introduction of civil registration, which occurred in that year.

* Censuses were taken on 31st December 1860, 1866, and 1877.

NOTE.—The numbers for Rome were first included with those for the Kingdom of Italy in 1872. The population figures given for census years show the numbers enumerated on 31st December in each of those years; whereas for the end of each of the other years the population is estimated on the assumption that the rate of increase which prevailed in the last inter-censal period has since been maintained.

* Census year.

TABLE 57.—ENGLAND. **Changes** in the **Constitution** of **Registration Districts** and **Sub-districts** during the Year **1890.**

N.B.—(1.) The Name of the District is in SMALL CAPITALS, that of the Sub-district in *Italics*.
(2.) The Populations quoted are the unrevised Numbers enumerated at the Census of 1891.

No. of District.	NAME OF REGISTRATION DISTRICT.	Date of Change.	Nature of Change.
		1890.	
3	CHELSEA - -	1 October -	The sub-district of *Chelsea North-East* was dissolved. The portion of the sub-district which forms the detached part of the parish of Chelsea was constituted a separate sub-district, named *Chelsea Kensal Town* (population 21,787). The remainder of the sub-district was added to *Chelsea North-West* sub-district, which was re-named *Chelsea North* (population 41,657), and the sub-districts in the district were re-numbered thus :—1. *Chelsea Kensal Town*, 2. *Chelsea North*, and 3. *Chelsea South*.
15	SHOREDITCH - -	1 April -	The sub-districts of *Holywell* and *St. Leonard* were united under the name of *Shoreditch South* (aggregate population 20,098).
50	MAIDSTONE - -	1 October -	The three sub-districts of *Marden*, *Loose*, and *Yalding* were dissolved, and the parishes of which they consisted re-arranged into two sub-districts as follows :—The new sub-district of *Yalding* comprises the parishes of Yalding, Nettlestead, Marden, and Staplehurst (population 7,277) ; and the new sub-district of *Loose* comprises the parishes of Teston, West Farleigh, Hunton, Linton (including part of Maidstone added to Linton), Boughton Monchelsea, Otham, Bearsted, Loose, East Farleigh, Barming, and West Barming (population 8,630).
91	ISLE OF WIGHT - -	1 January -	The old sub-district of *Ryde* was divided into two sub-districts as follows :—The new sub-district of *Ryde* comprises the parishes of Binstead, Ryde, and St. Helen's (population 17,846) ; and the new sub-district of *Brading* comprises part of the parish of Newchurch formerly in the old sub-district of Ryde, and the parishes of Brading, Yaverland, and Shanklin (population 11,979). The sub-districts of *Godshill* and *Calbourne* were re-numbered 5 and 6.
181	NEWMARKET - -	1 October -	The sub-districts of *Gazeley* and *Cheveley* were united under the name of *Chevetey*, and the parish of Newmarket All Saints transferred from the *Cheveley* sub-district to that of *Newmarket*. The sub-districts were re-numbered as follows :—1. *Cheveley* (population 8,845), 2. *Newmarket* (population 13,139), and 3. *Soham* (population 8,448).
186	WEST HAM - -	1 January -	The old sub-district of *West Ham* was divided into two parts as follows :—The *West Ham* sub-district comprises the part of the parish of West Ham formerly in West Ham sub-district (population 161,920) ; and *East Ham* sub-district comprises the parishes of East Ham and Little Ilford (population 32,710). The sub-districts of *Leyton* and *Walthamstow* were re-numbered 4 and 5.
194	MALDON - - -	1 August -	The sub-district of *St. Peter* was dissolved and the parishes which it formerly comprised were distributed as follows :—The parishes of St. Peter and St. Mary, Langford, and Ulting were added to the sub-district of *All Saints* (re-named *Maldon*) ; and the parishes of Wickham Bishops, Great Braxted, Little Braxted, Great Totham, Little Totham, and Heybridge were added to the sub-district of *Tollesbury*. The sub-districts were re-numbered thus :—1. *Southminster* (population 4,766), 2. *Bradwell* (population 2,516), 3. *Maldon* (population 8,732), and 4. *Tollesbury* (population 7,465).

Table 57.—ENGLAND. Changes in the Constitution of Registration Districts and Sub-districts during the Year 1890—*continued.*

No. of District.	NAME OF REGISTRATION DISTRICT.	Date of Change.	Nature of Change.
		1890.	
213	IPSWICH - - -	1 January -	The sub-district of *St. Margaret* was dissolved and its parts distributed between the two other sub-districts in the IPSWICH district as follows:—The parishes of St. Mary-at-the-Tower, St. Stephen, and Westerfield were added to the sub-district of *St. Matthew*, which was re-named *Ipswich Western;* and the parishes of St. Helen and St. Margaret were added to the sub-district of *St. Clement*, which was re-named *Ipswich Eastern*. The sub-districts were re-numbered thus:—1. *Ipswich Western* (population 27,427), and 2. *Ipswich Eastern* (population 29,654).
389	LICHFIELD - -	1 August -	The sub-districts of *Yoxall* and *Rugeley* were united under the name of *Rugeley* (aggregate population 14,458).
396	STRATFORD-ON-AVON -	1 November	The *Stratford-on-Avon* sub-district was dissolved, and of its constituent parishes that of Snitterfield was added to the *Wootton Wawen* sub-district; and all the remaining parishes, viz., Stratford-on-Avon, Atherstone-on-Stour, Whitchurch, Alderminster, Clifford Chambers, and Preston-on-Stour were added to the *Old Stratford* sub-district, which was re-named *Stratford-on-Avon*. The sub-districts in the STRATFORD-ON-AVON district were re-numbered thus:—1. *Wellesbourne* (population 5,752), 2. *Stratford-on-Avon* (population, 11,788), and 3. *Wootton Wawen* (population 4,353).
431	NOTTINGHAM - -	1 April -	The sub-district of *Byron* was united to that of *St. Ann*, and this amalgamation having completed the original scheme, the names of the different sub-districts were altered and re-numbered as follows:—1. *Lenton* re-named *Nottingham South-West* (population 28,558), 2. *Radford* re-named *Nottingham North-West* (population 54,885), 3. *St. Ann* re-named *Nottingham North-East* (population 52,597), and 4. *Exchange* re-named *Nottingham South-East* (population 40,880).
477	FYLDE - - -	1 January -	The old sub-district of *Poulton-le-Fylde* was divided into two sub-districts, viz.:—The parishes of Bispham-with-Norbreck, Layton-with-Warbreck, the part of Marton previously situated in *Poulton-le-Fylde* sub-district, and Hardhorn-with-Newton were constituted a new sub-district named *Blackpool* (population 25,556); and the remaining parishes, viz., Carleton, Poulton-le-Fylde, Thornton, and Great and Little Singleton, together with the two parishes of Little Eccleston-with-Larbreck and Elswick (transferred from the sub-district of *Kirkham*), were constituted a new sub-district named *Fleetwood* (population 12,888).
587	PONTYPRIDD - -	1 October -	The sub-district of *Pontypridd* was divided into two sub-districts, viz.:—The two parishes of Llanfabon and Eglwysilan forming one sub-district, named *Eglwysilan* (population 18,832), and the parish of Llanwonno forming the other sub-district, named *Llanwonno* (population 30,712).

NOTE.—No change affecting the population of any registration District or Sub-district was made during 1890 under the provisions of the Divided Parishes and Poor Law Amendment Acts, 1876 and 1879.

* The *Registration Counties* consist of groups of Registration Districts, which are generally co-extensive with the Poor Law Unions. A District which extends into two or more Geographical Counties is included entirely in that Registration County in which the principal town of the District, or the greater part of the population, is located. The boundaries of the Registration Counties differ therefore more or less from the boundaries of the Geographical Counties. For areas and populations of the Registration Divisions and Counties, *see* pages 64–67.

* The 632 *Registration Districts* (Paddington 1a and Holyhead 630b having been constituted Registration Districts since the numerical arrangement 1 to 630 was adopted on 1st January 1881) are collections of contiguous Parishes or Places combined for purposes connected with the Registration of Births, Deaths, and Marriages, and are nearly always identical with the Poor Law Unions of the same names; they are arranged, according to the local position, under the Registration Counties. The Registration Sub-districts (2124 in number at the end of the year 1890) are sub-divisions of Registration Districts, within which the Births and Deaths are registered by Registrars severally appointed for that purpose. The letter *W* denotes that the Sub-district contains within its limits a Workhouse Establishment belonging to the District or Union; *w* indicates that a Workhouse Establishment receiving inmates from other Districts than the one in which it stands is included; *H* indicates a Hospital or Infirmary; *L* a Lunatic Asylum; and repetitions of these letters show the number of such Institutions in each Registration sub-district.

† The Deaths in the principal Institutions in England in 1890 are given on pages 71-94.

‡ 3: 1, 2, 3.—On 1st Oct. 1890 the Registration District of Chelsea was re-divided into three districts as follows: the detached part of Chelsea parish situated at Kensal Green to form the *Chelsea Kensal Town* sub-district; and the portions to the north and south respectively of the middle of King's Road to form *Chelsea North* and *Chelsea South* sub-districts. *See* Table 57, pp. lxxv-lxxvi.

* 50: 1, 2.—On the 1st October 1890, the three sub-districts of Marden, Loose, and Yalding were dissolved, and the parishes of which they consisted rearranged into two sub-districts, viz., *Yalding* and *Loose*. The Births and Deaths are shown as if the change had come into operation at the beginning of the year. *See* Table 57, pp. lxxv-lxxvi.

* 181 : 1, 2.—On the 1st October 1890, the Gazeley sub-district was amalgamated with the *Cheveley* sub-district, and the parish of Newmarket All Saints was transferred from the Cheveley sub-district to the Newmarket sub-district. The Births and Deaths are shown as if the change had come into operation at the beginning of the year. *See* Table 57, pp. lxxv-lxxvi.

† 186 : 2, 3.—On 1st January 1890, the Registration sub district of *West Ham* was divided into two sub-districts, which were named *West Ham* and *East Ham*.

* 369 : 2.—On the 1st of August 1890, the sub-districts of *Yoxall* and *Rugeley* were united for registration purposes under the name of *Rugeley* sub-district. The Births and Deaths are shown as if the change had come into operation at the beginning of the year. *See* Table 57, pp. lxxv-lxxvi.

† 371.—The District of Wolverhampton comprises the two Poor Law Unions of Seisdon (Tettenhall, Kinver and Wombourn sub-districts), and Wolverhampton (Wolverhampton Western, Wolverhampton Eastern, Willenhall, and Bilston sub-districts).

* 396 : 2, 3.—On the 1st November 1890, the Stratford-on-Avon sub-district was dissolved, and of its constituent parishes, that of Snitterfield was added to the *Wootton Wawen* sub-district, and all the remaining parishes were added to the old Stratford sub-district which was re-named the *Stratford on-Avon* sub-district. The Births and Deaths are shown as if the change had come into operation at the beginning of the year. *See* Table 57, pp. lxxv-lxxvi.

* 431.—On the 1st of April 1890 the sub-district of Byron was added to that of St. Ann, and the four sub districts of Lenton, Radford, St. Ann, and Exchange were respectively renamed *Nottingham South-West*, *Nottingham North-West*, *Nottingham North-East*, and *Nottingham South-East* sub-districts. The Births and Deaths are shown as if the change had come into operation at the beginning of the year. *See* Table 57, pp. lxxv-lxxvi.

* 587 : 1, 2.—On the 1st October 1890, the sub-district of Pontypridd was divided into two sub-districts, viz., the parish of Llanwonno to form the *Llanwonno* sub-district; and the two parishes of Llanfabon and Eglwysilan to form the *Eglwysilan* sub-district. The births and deaths are shown as if the change had come into operation at the beginning of the year. *See* Table 57, pp. lxxv-lxxvi.

DEATHS IN WORKHOUSES, HOSPITALS, AND PUBLIC LUNATIC ASYLUMS.

1890.

THE following Table shows the numbers of deaths (Persons, Males, and Females) registered during 1890 in the Workhouses, Hospitals, and Public Lunatic Asylums of England. These figures afford the means of correcting the mortality of districts and sub-districts in which these Institutions are situated. The Table includes 1838 Institutions; of which 741 are Workhouses, Workhouse Infirmaries, or Workhouse Schools; 1007 Hospitals or Infirmaries; and 90 Lunatic Asylums. The Lunatic Asylums are mostly County Asylums, but a few private Asylums which receive pauper patients (held on that account to be public for the purposes of this Table) are also included. In these 1838 Institutions 65,161 deaths were registered during the year, or 11·6 per cent. of the total deaths in England and Wales, against 11·4 and 11·2 per cent. in the two preceding years; 39,346 occurred in Workhouses, 19,655 in Hospitals, and 6160 in Lunatic Asylums. The proportion to total deaths was 7·0 per cent. in Workhouses, 3·5 in Hospitals, and 1·1 in Lunatic Asylums. The proportion of deaths recorded in Workhouses, which had been 6·9 and 6·6 per cent. in 1888 and 1889, rose again to 7·0 per cent. in 1890.

Information relating to the deaths recorded in many Private Lunatic Asylums, Private Asylums for Idiots and Imbeciles, and in a few other institutions, will be found in the notes to the following pages.

Deaths in Workhouses, Hospitals, and Public Lunatic Asylums, 1890.

* In this classification of Violent Deaths the totals of the sub-divisions Burns, Scalds, &c., Drowning, and Suffocation, necessarily differ from the totals of the headings bearing similar names in the classification of Causes of Death on pp. 120, 121, as the classification here takes account of the cause of the injury, and there only of the nature of the injury.

* The deaths of 4 males from Hydrophobia in the year are classed under Zoogenous Diseases in the Table of Causes of Death (*see* p. 112).
† When a person dies from an operation, performed on account of any disease or injury the nature of which is stated in the certificate, the death is classed under that disease or injury.

OF the above 11600 ACCIDENTS, 131 are stated to have occurred to Men in a state of INTOXICATION, and 5 to Men suffering from DELIRIUM TREMENS. And in 311 other cases Death was accelerated by the supervention of ERYSIPELAS, MORTIFICATION, PYÆMIA, or TETANUS. Here follow the details:—

CAUSES INDUCING OR ACCELERATING DEATHS FROM ACCIDENT.	ALL AGES.	Total under 1 Year. Infants under 1 Month.	Others.	1–	2–	3–	4–	Total under 5 Years.	5–	10–	15–	20–	25–	35–	45–	55–	65–	75–	85 and upwards.
Intoxication at time of Accident	131	–	–	–	–	–	–	–	–	–	2	4	33	27	28	24	12	1	–
Delirium Tremens ditto	5	–	–	–	–	–	–	–	–	–	–	–	1	–	2	1	1	–	–	–
Acceleration by Erysipelas	28	–	–	–	–	1	–	1	–	–	1	1	2	4	5	1	7	5	1
Acceleration by Mortification	20	–	–	–	–	–	–	–	2	–	–	–	1	–	2	3	6	6	–
Acceleration by Pyæmia	137	1	1	5	–	4	2	13	7	5	6	3	18	22	20	25	16	2	–
Acceleration by Tetanus *	126	1	–	2	1	1	3	8	7	27	11	18	18	8	13	12	3	1	–

* Cases of tetanus which are not stated to be the result of injury are classed as "Idiopathic Tetanus" in the Table of Causes of Death (*see* page 114).

* The deaths of 4 females from Hydrophobia in the year are classed under Zoogenous diseases, in the Table of Causes of Death (*see* p. 113.)
† When a person dies from an operation, performed on account of any disease or injury the nature of which is stated in the certificate, the death is classed under that disease or injury.

OF the above 4663 ACCIDENTS, 63 are stated to have occurred to Women in a state of INTOXICATION, and 19 to Women suffering from DELIRIUM TREMENS. And in 64 other cases Death was accelerated by the supervention of ERYSIPELAS, MORTIFICATION, PYÆMIA, or TETANUS.* Here follow the details:—

CAUSES INDUCING OR ACCELERATING DEATHS FROM ACCIDENT.	ALL AGES.	Total under 1 Year.		1–	2–	3–	4–	Total under 5 Years.	5–	10–	15–	20–	25–	35–	45–	55–	65–	75–	85 and upwards.
		Infants under 1 Month.	Others.																
Intoxication at time of Accident	63	–	–	–	–	–	–	–	–		–	1	7	17	17	15	4	2	–
Delirium Tremens, ditto	19	–	–	–	–	–	–	–	2	–	–	3	2	–	–	8	2	2	–
Acceleration by Mortification	11	–	–	1	–	–	1	2	3	–	–	1	–	–	–	1	2	2	–
Acceleration by Pyæmia	33	–	1	–	1	–	1	3	–	4	–	1	3	3	8	6	1	4	–
Acceleration by Tetanus*	20	1	–	–	–	1	–	2	4	5	–	–	2	3	–	2	1	1	–

* Cases of Tetanus which are not stated to be the result of injury are classed as "Idiopathic Tetanus" in the Table of Causes of Deaths (*see* page 115).

INDEX OF REGISTRATION DISTRICTS.

The following Index furnishes a reference to the *Number* of each REGISTRATION DISTRICT in the topographical arrangement adopted in the Tables of Abstracts contained in the Report.* The alphabetical arrangement places compound names in the order in which they are pronounced: thus, East Ashford will be found under the letter E, and *not* under A.

In consequence of numerous alterations (amalgamations of districts and formations of new districts) since the numerical arrangement, 1 to 623, was adopted in the Abstracts for the year 1847, the districts were re-numbered consecutively from 1 to 630 in the Abstracts for the year 1881. Since that date two new Registration Districts have been formed, the District of Kensington (1) having been divided into Paddington (1*a*) and Kensington (1*b*), and the District of Anglesey (630) into Anglesey (630*a*) and Holyhead (630*b*).

For names of Towns, such as Leamington, Torquay, &c., which are not found in this "Index of Registration Districts," see the "Index of Registration Sub-districts" (pp. 208–217) *and "Index of certain Towns"* (pp. 218, 219).

INDEX OF REGISTRATION SUB-DISTRICTS.

This alphabetical arrangement places the Registration Sub-Districts (or Registrars' Districts) having *compound names* in the order indicated by the usual pronunciation of those names; thus, East Grinstead will be found under the letter E, and not under G; St. James under the letter S, and not as "James, St." The number against each Sub-District, in the third column, refers to its numerical place in the Tables of Abstracts; thus, Abbey Holme (573; 2) is the 2d Sub-District of the Wigton District, No. 573.]

Sub-District.	District.	No.
A		
Abbey Holme	Wigton	573; 2
Abbots Bromley	Uttoxeter	306; 2
Abbotsbury	Weymouth	264; 4
Abbots Langley	Watford	137; 4

GENERAL INDEX

TO

REGISTRAR-GENERAL'S FIFTY-THIRD ANNUAL REPORT (1890).

PAGES

ACCIDENT; Mortality from (Abstracts, pp. 193–199) . . . . . xv–xvii

AGES; Mean, at Marriage and Re-marriage, increase in viii
at Death. (Tables 11–14, pp. xxxiv–xxxvii) x
excessive Mortality in 1890 after middle age x
of 431,146 Persons married in 1890, distinguishing previous Civil Condition 68–70
at Death, of each sex, in Divisions and Counties, 1890 . . . 96–105
(*See also* DEATH RATES.)

AREA of United Kingdom and its parts. (Table 1.) . . . . xxiv–xxv
of Town and Country Districts in England and Wales. (Table 25.) . li
of Islands in the British Seas. (Table 27.) liii
of each District and Sub-district in England and Wales . . . 4–63
of each Division and County in England and Wales . . . 64, 66

ARMY, THE; Strength and Mortality of. (Table 29, p. liv.) . . . xviii

AUSTRALIAN COLONIES AND NEW ZEALAND; English Emigrants to. (Table 28.) liii

AUSTRIA; Population, Marriages, Births, and Deaths. (Tables 39, 47.) . lxiii, lxviii

BANKERS' CLEARING HOUSE, 1868–90. (Table C.) vii

BELGIUM; Population, Numbers and Proportion of Marriages, Births, and Deaths. (Tables 39, 53.). . . . . lxiii, lxxii

BIRTHS in England and Wales, 1890. (Abstracts, pp. 2–63.) . . . ix
Illegitimate. (Abstracts, pp. 2–63.) ix
Sex proportions. (Tables 2, p. xxvi, 3, p. xxvii, 10, p. xxxiii.) . ix
Premature; increasing mortality ascribed to xv
Aggregate Number of Names on Registers, 1841–90. (Table 26.) lii
in Islands in the British Seas. (Table 27.) liii
of British Subjects at Sea. (Table 32, p. lv.) xix
(*See also* MARINE REGISTER BOOK.)
in United Kingdom and its parts, and in other European States. (Tables 40–56.) . . . . . lxiv–lxxiv

BIRTH-RATES; Total, Legitimate, and Illegitimate. (Tables 2, p. xxvi, 3, 4, p. xxvii, 10, p. xxxiii.) ix
in United Kingdom and its parts, and in other European States. (Tables 39–56) . . . . . lxiii–lxxiv

CANCER; Mortality in 1890 the highest on record xiv

CAUSES OF DEATH; Mortality from the several Classes of. (Table E.) . xi–xvii

PAGES

CERTIFICATES of Marriages, Births, and Deaths issued in 1890 . . xviii

CERTIFICATION of Causes of Death xvii

CHANGES in Constitution of Registration Districts in 1890. (Table 57.) . lxxv–lxxvi

CHICKEN-POX, Mortality ascribed to, in recent years xi

CHILDBIRTH and Puerperal Fever, Mortality from. (Table 23, p. l.) . . xiv

CIRCULATORY ORGANS; excessive Mortality from, probably due to Influenza xiii

COAL; prices of, 1841–90. (Table 38.) lxii

CONSOLS; prices of, 1841–90. (Table 38.) lxii

CONSTITUTIONAL DISEASES; Mortality ascribed to. (Table E., p. xi.) . xiv–xv

excessive Mortality from, largely due to Influenza . . . xiv

COUNTRY DISTRICTS; Mortality in. (Tables 24, 25, p. li.) . . . x

DEATHS; in England and Wales, 1890 (Abstracts, pp. 2–63) . . . ix

from various Causes in England and Wales. (Table 15, pp. xxxviii–xxxix.) . . . . . xi–xvii

Certification of Causes of xvii

of British Subjects at Sea. (Tables 31, 32, p. lv.) . . . xix
(*See also* MARINE REGISTER BOOK.)

Proportional Number from various Causes to 1,000,000 Deaths from all Causes, 1890. (Table 22.) xlix

Aggregate Number of Names on Registers, 1841–90. (Table 26.) lii

in Islands in the British Seas. (Table 27.) liii

in United Kingdom and its Parts, and in other European States. (Tables 40–56.) . . . . . lxiv–lxxiv

in Public Institutions 71–94

in Divisions and Counties, classified according to sex and age . 96–105

in England and Wales, classified according to sex, age, and cause . 108–121

in London, classified according to sex, age, and cause . . . 122–135

in Registration Counties, classified according to sex and cause . 136–159

from several causes in Divisions, Counties, and Districts . . 160–192

in England and Wales from Accident, Suicide, Murder, and Manslaughter, distinguishing method, sex, and age . . . 193–205

DEATH-RATES; 1881–90, as calculated upon the earlier estimate and upon the 1891 Census enumeration (Table A.) vi

in certain Counties, showing the largest differences between the rates as published in 1889, and as calculated upon the revised population. (Table B.) vi

in 1890. (Table 2, p. xxvi.) ix

in Industrial and Rural Counties compared ix

of Males and Females compared. (Table 2, p. xxvi.) . . . ix

in groups of ages. (Tables 11–14, pp. xxxiv–xxxvii.) . . x

excessive after middle age x

among infants, comparison between sexes. (Table D.) . . x

in Urban and Rural Districts. (Tables 10, 24, 25, pp. xxxiii, li.) . x

from Classes of Causes. (Table E., p. xi.) . . . . xi–xvii

in Army and Navy in series of years. (Tables 29, 30, p. liv.) . xviii

in Merchant Service. (Table 31, p. lv.) xix

in United Kingdom and its parts, and in other European States. (Tables 39–56, pp. lxiii–lxxiv.) xix

general excess of, in European States xix

in years 1838–90, in groups of years, and in quarters. (Tables 2, 3, 4.) . . . . . xxvi–xxvii

PAGES

DEATH-RATES—*continued.*

from various Causes in England and Wales, 1866–90, and in groups of years, 1858–90. (Tables 16, 17.) . . . . . xl–xliii

from the Principal Zymotic Diseases in England and Wales, 1838–90. (Table 18.) xliv

from the Principal Zymotic Diseases in London, 1838–90. (Table 19.) xlv

from several Causes, in Counties, 1890. (Table 20.) . . . xlvi–xlvii

of Persons, Males, and Females, 1890, classified according to Cause. (Table 21.) xlviii

from Measles, Scarlet Fever, "Fever," Whooping-cough, and Puerperal Fever and Childbirth in Counties, 1880–89 and 1890. (Table 23.) l

. (*See also* INFANT MORTALITY.)

DENMARK; Population, Numbers, and Proportions of Marriages, Births, and Deaths. (Tables 39, 44.) . . . . . lxiii, lxvi

DENSITY OF POPULATION; Persons to a square Mile, 1851–90. (Table 24.) li

DEVELOPMENTAL DISEASES; Mortality ascribed to. (Table E., p. xi.) . xv

DIABETES; Mortality from, in 1890, highest on record xiv

DIARRHŒA and DYSENTERY; Mortality from, below the average . . xiv

DIETETIC DISEASES; Mortality ascribed to. (Table E., p. xi.) . . xiv

DIPHTHERIA; Mortality ascribed to xii

especially fatal in certain local areas xii

DISTRICTS, REGISTRATION; Alphabetical Index of 206–209

DIVORCED PERSONS; Re-marriages of viii

DYSENTERY. (*See* DIARRHŒA.)

EDUCATION; as shown by Signatures in Marriage Registers . . . viii

EMIGRATION from United Kingdom, 1871–90. (Table 28.) . . . liii

ENTERIC FEVER; general decline of this and other fevers in recent years . xii

especially fatal in certain local areas xii

ERYSIPELAS, apparently closely associated with Puerperal Fever . . xiv

EUROPEAN STATES; Populations, Numbers, and Proportions of Marriages, Births, and Deaths. (Tables 39–56.) . . . . . lxiii–lxxiv

EXPORTS of British Produce, fluctuations in, as affecting marriage-rate . vii

Value of, per head of Population. (Table C.) . . . vii

FEES received at General Register Office. (Table 26, p. lii.) . . . xviii

FEVER; general decline of enteric, typhus, &c. in recent years . . . xii

Mortality from, in Counties, 1880–89 and 1890. (Table 23.) . l

(*See also* ENTERIC FEVER.)

FRANCE; Population, Numbers and Proportions of Marriages, Births, and Deaths. (Tables 39, 54.) . . . . . lxiii, lxxiii

GERMAN EMPIRE; Population, Numbers and Proportions of Marriages, Births, and Deaths. (Tables 39, 50.) . . . . . lxiii, lxx

GLAISHER, JAMES, Esq., F.R.S.; Meteorology of 1890. (Tables 33–37, pp. lvi–lxi.) . . . . . xx–xxii

PAGES

GUERNSEY and ADJACENT ISLANDS; Area, Population, Baptisms, and Deaths. (Table 27.) liii

HOLLAND. (*See* NETHERLANDS.)

HOMICIDE; deaths ascribed to xv
(*See also* MANSLAUGHTER and MURDER.)

HOSPITALS, Deaths in 71–94

HUNGARY; Population, Numbers and Proportions of Marriages, Births, and Deaths. (Tables 39, 48.) . . . . . lxiii, lxix

HYDROPHOBIA; decreased Mortality from xiv
Two centres of attack in England xiv

ILL-DEFINED and NOT SPECIFIED CAUSES; Mortality ascribed to (Table E., p. xi.), and result of applications for fuller Information xvii

ILLEGITIMATE BIRTHS. (*See* BIRTHS.)

IMPORTS; Value of, per head of Population. (Table C.) . . . vii

INDEXES; Searches in. (Table 26, p. lii.) xviii
to Districts, Sub-Districts, and certain Towns 206–221

INFANT MORTALITY; in first year of life, in relation to sex. (Table D.) . x
in Counties (Table 10, p. xxxiii.) x
in England, 1838–90. (Table 18.) xliv
in London, 1841–90. (Table 19.) xlv

INFLUENZA; vague use of term. xiii
previous epidemics of xiii
Mortality directly ascribed to xiii
probable total Mortality caused by epidemic . . . . xiii–xiv
probably the cause of high Mortality in European States . . xix

INQUESTS; in 1890 xvii
in Divisions, Counties, and Districts 160–192

INSTITUTIONS, PUBLIC; Deaths in 71–94

INTEMPERANCE; increasing Mortality directly ascribed to . . . xiv

INTERNATIONAL VITAL STATISTICS. (Tables 39–56, pp. lxiii–lxxiv.) . xix
general excessive Mortality in European States probably caused by Influenza xix

INTOXICATION; Accidental Deaths while in a state of. (Abstracts, pp. 196, 199.) xiv

IRELAND; Area, Population, Numbers and Proportions of Marriages, Births, and Deaths. (Tables 1, 39, 43.) . . . . xxv, lxiii, lxv

IRISH EMIGRANTS from United Kingdom, 1871–90. (Table 28.) . . liii

ISLANDS in BRITISH SEAS; Area, Population, Births, and Deaths. (Table 27.) liii

ITALY; Population, Numbers and Proportions of Marriages, Births, and Deaths. (Tables 39, 56.) . . . . . lxiii, lxxiv

JERSEY; Area, Population, Births, and Deaths. (Table 27.) . . . liii

JEWS; decline of marriages among vii

PAGES

LEGITIMATE BIRTHS. (*See* BIRTHS.)

LOCAL DISEASES; excessive Mortality from, probably due to Influenza. (Table E., p. xi.) xv

LONDON; Mortality from principal Zymotic Diseases in 1838–90, and Infant Mortality, 1841–90. (Table 19.) xlv

Deaths in, classified according to Sex, Age, and Cause . . 122–135

Deaths in, from several Causes, and Inquests, in 1890 . . 160

LUNATIC ASYLUMS, PUBLIC; Deaths in 71–94

MAN, ISLE OF; Area, Population, Births, and Deaths. (Table 27.) . . liii

MANSLAUGHTER; Deaths ascribed to 204, 205

MARINE REGISTER BOOK; entries of Births and Deaths in, 1890 . . xix

MARRIAGES; number registered in England and Wales, 1890. (Abstracts, pp. 2–67.) vi

forms of celebration of. (Tables 5, 6, pp. xxviii, xxix; Abstracts, pp. 64–67.) vii

First Marriages and Re-Marriages. (Table 7, p. xxx; Abstracts, pp. 64–67.) viii

of Divorced Persons viii

Ages at Marriage, proportions stated and not stated . . . viii

of Minors declining. (Tables 7, 8, pp. xxx, xxxi; Abstracts, pp. 64–67.) viii

(*See also* AGES and SIGNATURE by MARK.)

Buildings registered for Solemnisation of. (Table 9, p. xxxii.) . viii

in United Kingdom and its parts, and in other European States. (Tables 40–56.) . . . . . lxiv–lxxiv

Aggregate number of Names of Persons married, on Registers, 1841–90. (Table 26.) lii

Condition and age of 431,146 Persons married 68–70

MARRIAGE-RATES; increase in. (Tables 2, 3, 4, 8, pp. xxvi, xxvii, xxxi.) . vi

Fluctuations in, compared with commercial fluctuations. (Table C.) vii

in the United Kingdom and its parts, and in other European States. (Tables 39–56.) . . . . . lxiii–lxxiv

MEASLES; apparently but little affected by sanitary measures . . . xi

areas especially affected by xi

Mortality from, in Counties, 1880–89 and 1890. (Table 23.) . l

MEAT; Average Prices of, 1850–90. (Table 38.) lxii

MERCANTILE MARINE; Strength and Mortality, and Births and Deaths of British Subjects at Sea. (Tables 31, 32, p. lv.) . . . xix

METEOROLOGY of 1890, by James Glaisher, Esq., F.R.S. (Tables 33–37, pp. lvi–lxi.) . . . . . xx–xxii

MORTALITY. (*See* CAUSES OF DEATH, AND DEATH-RATES.)

MURDER; Deaths ascribed to 202, 203

NAVY, THE; Mortality in. (Table 30, p. liv.) xviii

NEGLIGENCE; Deaths from. (*See* ACCIDENT.)

NETHERLANDS, THE; Population, Numbers and Proportions of Marriages, Births, and Deaths. (Tables 39, 52.) . . . . lxiii, lxxi

NEW ZEALAND. (*See* AUSTRALIAN COLONIES.)

NORTH AMERICAN COLONIES; English Emigrants to. (Table 28.) . . liii

PAGES

NORWAY; Population, Numbers and Proportions of Marriages, Births, and Deaths. (Tables 39, 45.) . . . . . lxiii, lxvi

OLD AGE; excessive Mortality in. (Tables 11, 12, pp. xxxiv., xxxv.) . x

PARASITIC DISEASES; Mortality from, 1881–90. (Table E.) . . . xi

PAUPERISM; Proportion to Population, 1849–90. (Table 38.) . . . lxii

PHTHISIS; increased Mortality from, probable due to Influenza. . . xiv
excess of in London during Influenza epidemic xv

POPULATION in 1890, and method of Estimating v
Results of Census of 1891 v
Growth of in 1881–91, less than in previous decennium . . v
Discrepancies in the estimated Populations, 1881–90, illustrated by comparative death-rates calculated on the earlier and amended estimates. (Table A.) vi
estimated, of United Kingdom, and its Parts, distinguishing Sex, 1841–90. (Table 1.) . . . . . xxiv–xxv
of Registration Counties, 1890. (Table 20.) . . . . xlvi–xlvii
of Town and Country Districts, 1890. (Table 25.) . . . li
1861–71–81–91, in Islands in British Seas. (Table 27.) . . liii
of United Kingdom, and its parts, and of other European States. (Tables 40–56.) . . . . . lxiv–lxxiv
enumerated in 1891, in Districts and Sub-districts . . . 4–63
enumerated in 1891, in Registration Divisions and Counties . . 64, 66

PREMATURE BIRTH; increasing Mortality ascribed to xv

PRICES; of Consols, Wheat, and Coal, 1841–90; and of Meat, 1850–90. (Table 38.) lxii

PRUSSIA; Population, Numbers and Proportions of Marriages, Births and Deaths. (Tables 39, 51.) . . . . . lxiii, lxx

PUBLIC INSTITUTIONS. (*See* INSTITUTIONS.)

PUERPERAL FEVER; Mortality from, in 1890, and its apparent close relation to Erysipelas xiv

REGISTERS; Aggregate number of Names upon. (Table 26, p. lii.) . . xviii
and RECORDS in General Register Office xviii

REGISTRATION; Progress of. (Table 26, p. lii.) xviii

REGISTRATION ACT; Offences against in 1890 xviii

RE-MARRIAGES. (*See* MARRIAGES.)

RESPIRATORY DISEASES; excessive Mortality from, probably due to Influenza xiii

RURAL MORTALITY. (Tables 24, 25, p. li.) x

SCARLET FEVER; decrease of Mortality from, in recent years . . . xii
most prevalent in Mining and Industrial centres . . . xii

REPORT

TO

The Right Honourable HENRY FOWLER, M.P., President of the Local Government Board, &c. &c.

(1891.)

SIR,

I HAVE the honour to submit to you the following report on the marriages, births, and deaths registered in England and Wales in the year 1891.

POPULATION.

The population of England and Wales, as enumerated on 6th April 1891, consisted of 29,001,018 persons: this number, however, is still subject to revision. The natural increase, or the excess of births over deaths, from the beginning of April to the middle of the year amounted to 67,638; so that the population at the later date, were its growth determined simply by the balance between births and deaths, would have been 29,068,656. Emigration and immigration cannot, however, be disregarded in an estimate of the population: and, in the absence of sufficiently full information on these points, the estimated populations published in the Annual Reports are based on the assumption that the rate of increase which prevailed in the last intercensal period has since been maintained, a method which, it has been shown (*see* pp. v–vi of 50th Annual Report), is not likely to lead to serious error when so large an area as the entire country is dealt with.

The population, thus estimated, in the middle of the year 1891 was 29,081,047, and consisted of 14,089,393 males and 14,991,654 females (Table 1). It is on this estimated population that the rates in this report have been calculated.

MARRIAGES.

The number of marriages registered in the year was 226,526, and corresponded to a rate of 7·8 marriages, or 15·6 persons married, per 1000 living. The rate in 1886 was only 14·2, but from that date it has risen continuously, first to 14·4 in the years 1887 and 1888, then to 15·0 in 1889, then to 15·5 in 1890, until in 1891, as above stated, it reached 15·6, being higher than in any year since 1877. If, therefore, the marriage-rate be an index of prosperity, the condition of the country has, on the whole, been improving for five successive years.

It is, however, to be noted that the slight rise in the rate in 1891 coincided, contrary to the almost universal rule, with a considerable decline in the value of British exports, and in the amount cleared at the Bankers'

Clearing House, per head of population, as is shown in the following table:

TABLE A.—MARRIAGE-RATE, BRITISH EXPORTS and IMPORTS, PRICE of WHEAT, and amount cleared at the London Bankers' Clearing House, 1860–91.*

* The figures in the marriage-rate column are not strictly comparable with those in the value columns, inasmuch as the former relate only to England and Wales, while the latter relate to the whole of the United Kingdom. The figures relating to exports and imports and to the price of wheat are derived from the Board of Trade Statistical Abstracts; and those showing the amount cleared at the London Bankers' Clearing House (calculated upon the population of England and Wales) are derived from the same source.

Forms of Marriage.—Of the 226,526 marriages contracted in the year, 158,439, or 699 per 1000, were celebrated according to the rites of the Established Church, and 68,087, or 301 per 1000, otherwise. In the next preceding year, 1890, the proportions had been 701 and 299, or practically the same as in 1891 (Table 5). The proportion of Roman Catholic marriages fell from 43 to 42 in the thousand, while that of the various dissenting denominations rose from 115 to 118; but the most noticeable change was in the Jewish marriages, of which the proportion, which had been gradually rising for a long series of years, reached 4·6 per 1,000. A comparison between this figure and the proportion in 1870, when the rise first became noticeable, would lead to the inference that the proportion of Jews in the population of this country has more than doubled in the last 20 years.

First marriages; Re-marriages.—Of 1000 men married in 1891, 886 were bachelors, and 114 were widowers; while of 1000 women who married, 919 were spinsters and 81 were widows; and it will be seen on looking at Table 7, where the proportions for former years are given, that the proportions of bachelors and spinsters are the highest recorded, and that the proportions of widowers and widows have been declining for many years; showing that second marriages have been becoming more and more rare as compared with first marriages. The number of persons married in 1891 who were described in the register as having been previously divorced, and who, in the above proportions, are included among the bachelors and spinsters, was 184, including 100 men and 84 women. This total exceeded that recorded in any of the six preceding years, in which the numbers had been respectively 170, 163, 173, 178, 150, and 181. Of the 100 divorced men, 82 married spinsters, 12 married widows, and 6 married divorced women. Of the 84 divorced women, 66 married bachelors, 12 married widowers, and 6 married divorced men.

Ages at Marriage.—In 6414, or 2·8 per cent., of the marriages, the ages of both contracting parties were not inserted in the register. The mean ages of the remaining 220,112 couples, whose ages were stated, were 28·37 for the men and 26·08 for the women. The mean age of the bachelors was 26·44, of the widowers 44·30, of the spinsters 24·87, and of the widows 40·43. In each of these groups, with the exception of the widows, the mean age was the highest recorded, and that of the widows was almost the highest. This shows, as also have the returns for other recent years, that there is an increasing tendency to defer marriage. Evidence to the same effect is afforded by the decline in the proportion of under-age marriages. In the earlier years of civil registration (Table 7) the proportions of those who married under 21 years of age were less than 50 in the thousand for men, and less than 150 in the thousand for women; but these proportions went on increasing steadily until in 1874 they stood at 84 in the thousand for the men, and 227 in the thousand for the women; these being respectively the maximum record for each sex. Then set in a change, and the under-age marriages began steadily to decline, and they have continued to do so almost uninterruptedly to the last year, when the figures stood at 59 for the men and at 190 for women, or almost at the level of 1858.

The counties in which the proportions of under-age marriages among men in 1891 were highest were Bedfordshire, Staffordshire, Leicestershire, Nottinghamshire, and Northamptonshire; and that this is not the casual occurrence of a single year is shown by the fact that these five counties were also those with the highest average proportions in the whole decennium 1881–90. The counties with the highest proportions for women were Durham, Monmouthshire, Nottinghamshire, Staffordshire, Leicestershire, Derbyshire, and Yorkshire, and these seven counties also stood

highest in the list in the previous decennium. Almost similar agreement between the figures for 1891 and for the previous decennium exists for the counties with the lowest proportions; there being for men, Herefordshire, Shropshire, Rutlandshire, and North Wales, in both cases; and for women, Devonshire, Herefordshire, Shropshire, Rutlandshire, Westmorland, and North Wales, with the casual interposition only in 1891 of Hertfordshire and Oxfordshire.

It is plain, therefore, that the comparative prevalence in different counties of early marriages is not merely a temporary phenomenon, but one depending on persistent causes.

Signature in Marriage Register.—The men who signed the marriage register with marks instead of writing their names were in the proportion of 64 in 1000, while the similarly illiterate women were 73 in 1000. In 21 out of 1000 marriages both bridegroom and bride used that form of signature. With the progress of elementary education there has been a continuous diminution in the proportions of both men and women signing with marks; and in 1891 the proportions, as compared with those in 1890, showed a reduction of 11 per cent. for men and of 12 per cent. for women.

Buildings registered for the Solemnisation of Marriages.—At the end of 1891 there were 15,044 churches or chapels belonging to the Established Church in which marriages could be solemnised, showing an increase of 40 upon the number at the end of the preceding year. There were also 10,781 buildings registered for marriage by other rites than those of the Established Church, showing an increase of 228, or 2·2 per cent., upon the number on the register at the end of 1890. (Table 9.)

Certified Places of Worship.—During the year 1891, 545 new buildings were certified for religious worship under the provisions of the Acts 15 & 16 Vict. c. 36, and 18 & 19 Vict. c. 81, while 107 buildings already certified were removed from the register by cancellation; the number of buildings so certified on the register at the end of the year was 27,323. It is probable, however, that some of these are no longer used, though no steps have been taken to remove them from the register by cancellation.

Births.

The births registered in the year numbered 914,157, and were in the proportion of 31·4 to 1000 persons living, this rate being higher than that of any one of the three next preceding years, 1888–90, but still considerably below the average. The birth-rate in 1876 was 36·3 per 1000, and, with one insignificant exception, fell year by year continuously until it reached in 1890 the lowest figure as yet recorded, 30·2. The considerable rise, therefore, in 1891 is noteworthy. It reflects doubtlessly the upward change in the marriage-rate which set in a year or two previously. For the main factor in determining the birth-rate is of course the marriage-rate; not however the marriage-rate of the same or even of the next preceding year, but the combined rates of several preceding years. Were this the sole factor, it might be prophesied with much certainty that the birth-rate in 1892 will be again higher than that of 1891. But a careful comparison of the marriage and birth rates for a long succession of years (Table 2) shows that there must be some other factor or factors at work in the matter, for in no way apparently can the two series of rates be brought into harmonious correspondence. It may possibly be that as there are doubtlessly months in the year in which fertility is above the average of the other months, so also there are years in which it is

above the average of other years; and it must also certainly be the case that one disturbing factor will be the presence or absence of those epidemic diseases that seriously affect the health and vigour of persons of reproductive ages. Such an epidemic is influenza, which falls, as will be seen later on, with great severity upon persons in the middle period of life, and whether the birth-rate in 1892 will show a further advance upon that of 1891 will depend at any rate in some measure upon which of these two factors—the increased marriage-rate of recent years or the enfeebled health of persons of reproductive ages—has been the more potent. Judging from the provisional birth returns of the first two quarters of the current year, the effect of the influenza outbreak of 1891 upon the birth-rate must have been considerable.

Although the birth-rate in 1891 was higher than in any one of the three preceding years, it was still considerably below the average, and even considerably below the average of the low rates in the preceding decennium, 1881–90, which had been 32·5.

The registration counties in which the birth-rates were highest were as usual the mining and industrial counties; one reason for this being that the proportion of young married persons of reproductive ages is higher in such counties than in the country at large; thus the highest rates were 33·0 in Derbyshire, 33·3 in Lancashire, 34·1 in Northumberland, 35·1 in South Wales, 36·3 in Staffordshire, 36·4 in Monmouthshire, and 38·2 in Durham. On the other hand the lowest rates, in no case exceeding 27·5, were in Surrey, Sussex, Hertfordshire, Huntingdonshire, Dorsetshire, Devonshire, Herefordshire, Shropshire, Rutlandshire, Westmorland, and North Wales. (Table 10.)

Sex.—The male births numbered 465,660, and the female births 448,497, the former being to the latter in the proportion of 1038 to 1000, the average proportion in the preceding decennium having been 1037 to 1000.

It will be seen in Table 10 that there are considerable differences in this respect between different registration counties; nor is this only the case when a single year or even a single decennium is taken, but when the calculation is based on a much larger period, which it might be anticipated would equalise matters. Even when the births for thirty years are taken as the basis, the proportion of male infants to 1000 female infants varies from 1032 and 1033 in some counties to 1055, 1056, and 1058 in others; and it may be noticed that the registration counties with the highest proportions are Cumberland, Cornwall, and North Wales, while South Wales, though it has not the next highest proportion, comes only a little way down in the list, its proportion being 1046, and considerably above the average for the whole country. No explanation of this can be given, the mysterious laws that determine sex being unknown; but the Celtic character of the areas mentioned above as having the highest proportions of male infants suggests the idea that not impossibly race has some influence in the matter; a surmise which is not inconsistent with the fact that the proportions are invariably much higher both in Ireland and in Scotland than in England. In Ireland it was 1058 in the last decennium, in Scotland 1054, while in England and Wales it was only 1037.

Illegitimate Births.—The infants registered as born out of wedlock numbered 38,781, and were in the proportion of 42 to 1000 births, and 1·3 to 1000 persons living, these proportions being the lowest as yet recorded (Table 2). The registration counties in which the proportions of illegitimate to total births were highest were, as usually, Norfolk, Herefordshire, Shropshire, Cumberland, Westmorland, and North Wales. (Table 10.)

DEATHS.

The deaths registered in 1891 numbered 587,925, and were in the proportion of 20·2 to 1000 persons living. This was a higher rate than that of any one of the ten preceding years, 1881–90, in none of which had the rate reached 20·0 per 1000, the highest among them having been 19·7, which was the rate recorded in 1884, and the average for the whole ten years having been 19·1. With the exception, however, of these ten consecutive years the rate of 1891 was the lowest recorded in the last half century, the eleven last annual rates being therefore the eleven lowest in the fifty years table. (Table 2.)

The rise in the death-rate above the previous decennial average was shared by pretty nearly all parts of the country, the only registration counties that did not show an increase being Kent, Middlesex, Hertfordshire, Bedfordshire, Essex, Dorsetshire, and Nottinghamshire.

The lowest rates, in no case exceeding 16·5 per 1000, were in Surrey, Kent, Sussex, Middlesex, and Dorsetshire, while the highest were 22·5 in South Wales, 23·4 in Monmouthshire, and 23·8 in Lancashire. (Table 10.)

Sex.—The 587,925 deaths included 302,494 of males and 285,431 of females. The death-rate of males was 21·5, and that of females 19·0 per 1000 living of the corresponding sex; and what was said of the general death-rate in the last paragraph was true also for each sex separately; that is to say, the mortality both of males and of females in 1891 was higher than in any one of the ten next preceding years, but otherwise the lowest on record. (Tables 11 and 12.)

Out of equal numbers living there were 1128 deaths of males to 1000 deaths of females, the difference being not so great as it had been in the next preceding year 1890, but nevertheless considerably above the average. As has been noted in previous reports the conditions of life have become in recent years increasingly unfavourable to the male as compared with the female sex. (Tables 2 and 3.)

Ages.—The mortality in 1891 showed the same feature as did that of the preceding year, and in a much more marked degree, namely, extraordinarily high death-rates at the later age-periods, with rates considerably below the average at the younger periods. In the 35–45 year period the rate for each sex was the highest there had been for more than ten years; and at each age-period after this was either absolutely the highest on record or the highest with some trifling exceptions. At each of the earlier periods the rates were considerably below the average, and in most cases the lowest or almost the lowest on record, the only notable exception being the earliest age-period, 0—5, when the rates, though much below the average, were higher than in any one of the four next preceding years. This remarkable increase of mortality at the advanced ages was due, as will be seen later on, both in 1891 and in 1890 to the prevalence of epidemic influenza.

The infantile death-rate, or proportion of deaths of infants under one year to 1000 registered births, was 149 per 1000; a proportion which was equalled in 1886 and slightly exceeded in 1890, but otherwise was higher than in any year of the preceding decennium (Table 18.) The rates differed widely in different counties; and that these differences are not merely casual is shown by their being repeated with great persistence year after year, the general rule being that the rate is lowest in the purely agricultural and

highest in the mining counties and those with textile industries (Table 10.) It is in the towns of these latter counties that the infantile mortality assumes the highest proportions, the three towns which invariably, or almost invariably, are the worst in this respect being Preston, Leicester, and Blackburn. Both in 1891, and in the whole decennium, 1881–90, these three towns had the highest infantile death-rates of all the towns included in the Weekly Returns. They have, therefore, been selected for use in the following Table, which gives the numbers of survivors after a lapse of 3 months, 6 months, and an entire year, out of 100,000 births respectively in three agricultural counties, namely, Hertfordshire, Wiltshire, Dorsetshire; in five mining or industrial counties, namely, Staffordshire, Leicestershire, Lancashire, West Riding, and Durham; and lastly in these selected towns themselves.

TABLE B.—INFANTILE MORTALITY, 1889 91.

Age.	Of 100,000 born, the Numbers surviving at each Age.			Annual Death-rates per 1000 living in each successive interval of Age.		
	Three Rural Counties.	Five Mining and Manufacturing Counties.	Three Selected Towns.	Three Rural Counties.	Five Mining and Manufacturing Counties.	Three Selected Towns.
At Birth -	100,000	100,000	100,000	213	331	382
3 Months	94,820	92,051	90,874	75	154	240
6 „	93,068	88,574	85,574	.61	128	180
12 „	90,283	83,081	78,197	—	—	—

It will be seen that, of 100,000 infants born in the agricultural counties, 94,820 would be living after a lapse of three months, whereas, in the three towns, the survivors out of a similar number of births would be only 90,874; after six months, the numbers stood at 93,068 for the rural counties, and at 85,574 for the towns; while, at the end of a year, the figures are respectively 90,283 and 78,197, or, in round numbers, for 10,000 deaths in the rural counties, there would be 22,000 deaths in the towns in each case out of 100,000 live-born children. The figures for the five manufacturing or mining counties lie between the other two, as might be anticipated, seeing that such counties are not purely industrial, but contain a considerable intermixture of rural elements.

The whole subject of infantile mortality is of such importance and interest that it has been thought worth while to subject these figures for the three rural counties and the three towns, between which the contrast is greatest, to a further and more minute examination. For this purpose the entire death-registers for these counties and towns have been gone through for three years, 1889–90–91, and the deaths of infants under one abstracted, with the exact ages and causes of death as stated. From these data the following life tables for the first year of life have been constructed, giving the survivors of 100,000 born in each area, at the end of each of the first seven days of life, at the end of each of the first four weeks of life, and at the end of each month of life.

TABLE C.—LIFE TABLES FOR THE FIRST YEAR OF LIFE.

Age.	Of 100,000 born, the Numbers surviving at each Age.		Deaths in each successive Interval of Age.		Annual Death-rates per 1,000 living in each successive Interval of Age.		Death-rates in Towns to Death-rates in Counties, taken as 100.
	Three Rural Counties.	Three Selected Towns.	Three Rural Counties.	Three Selected Towns.	Three Rural Counties.	Three Selected Towns.

12	90,283	78,197	—	—	—	—	—

In considering these life tables, it will be well to begin by noticing the points in which the tables for counties and towns agree, and to defer till afterwards the discussion of their points of difference; and further, in so doing, it will be well to disregard trivial irregularities in the figures, which might very possibly disappear were the tables built on a wider basis than three years' experience. In both tables, then, the mortality is highest in the first day of life, and then falls rapidly, still, however, remaining very high, through the remaining days of the first week in succession. This is fully intelligible; the infants that are scarcely viable at birth die almost at once, or linger but a day or two.

Coming to weeks instead of days, the mortality is at its maximum in the first week, falls enormously in the second week, remains at much the same level through the third week, and then shows a fresh very considerable

decline in the fourth. Even in the fourth week, however, the mortality is very high. That there should be no fall in the third as compared with the second week is curious; indeed, in the towns the mortality rises in the third week. But the fact that the same phenomenon is presented both by the counties and the towns seems to show that this absence of a fall must have some other explanation than an insufficient basis of data.

Passing from weeks to months, the mortality falls in the second month to a small fraction of its previous height, then much more gradually but continuously to the end of the seventh or eighth month, after which no notable change takes place through the remainder of the period, though there is some apparent tendency to further decline.

Such are the general points in which the tables for counties and for towns agree. Both show an excessively high mortality in the earliest days of life, which becomes less and less as days, weeks, and months pass by, until the seventh or eighth month has elapsed, when the decline either is arrested or becomes very much smaller. In both the mortality is so high in the first three days, or even in the entire first week that, were it maintained without diminution, every infant would die without nearly completing one year of existence.

These features, inasmuch as they are presented alike by the comparatively low infantile mortality of rural counties and by the excessive infantile mortality of certain selected towns, must be regarded as distinguishing infantile mortality generally.

Thus much then as to the points of agreement in the two life tables. It remains to consider the points of contrast.

In the first place the aggregate infantile mortality is more than twice as high in the three towns as it is in the three rural counties, the exact figures being 21,803 deaths in the former to 9,717 in the latter, in each case out of 100,000 births.

Secondly, the town rate is higher than the rural rate, not only in the aggregate for the year but for each fraction of the year, with the exception —possibly but not certainly due to the insufficiently large basis of calculation—of the fourth, fifth, and sixth days of the first week, when the rates are practically equal.

Thirdly, the periods when the town rates are most in excess of the rural rates are not the earliest weeks or months of infancy but the later months. In the first week of life the town rate exceeds the rural rate by 23 per cent., in the second week by 64 per cent., in the third week by 83 per cent., and in the fourth week by 97 per cent., showing a progressive or accumulative increase in the deleterious effects of town conditions as compared with rural conditions upon infantile life. The same result comes out when the rates for successive months in the counties and towns are examined. In the first month the town mortality is 27 per cent. above the rural rate, in the second month 121 per cent. above it; and the excess then goes on increasing until in the sixth month it amounts to no less than 273 per cent. This is the month in which the difference in greatest, though it remains throughout the rest of the year at a not very much lower point.

The conditions of life, then, in such towns as Preston, Leicester, and Blackburn, extremely destructive as they are throughout to infants in the first year of life, are much less so in the earliest periods of that year than later on, and are especially destructive after the second month is over.

The diseases to which infants succumb are often obscure, and the causes of their deaths are consequently to a great extent returned under somewhat indefinite terms, and especially is this the case with those who live but a few days or weeks. Nevertheless, the two following tables, which are the first of their kind that have been constructed, will be found of interest. They give the alleged causes of death and precise age of those infants who die in the first year of life out of 100,000 live-born children; the first table (Table D) relating to the three agricultural counties, and the second (Table E) to the three selected towns.

The full examination of these tables cannot here be undertaken. It must suffice to notice briefly some of the chief points in which the two tables agree, and which may therefore be taken as general facts applying to all infantile mortality; and then, also briefly, to note the main points of difference between the rural and the town tables.

The excessively high mortality of the first week, and indeed of the first month, is almost entirely due to the rapid decease of the greater part of those who perish from Premature Birth, or from Congenital Malformations, or with such feeble vitality as to be scarcely viable; the assigned cause of death in these latter cases being as a rule Atelectasis, Atrophy, or Convulsions. More than four-fifths of the deaths in the first month are returned under these five headings. Definite diseases scarcely begin till later on. To this, however, there are some exceptions, such as diseases of the liver and digestive organs, and erysipelas (the Icterus and Erysipelas Neonatorum), which are vastly more destructive in the first than in the later months. The first month past, the deaths from the above mentioned causes become much less numerous, while other causes, hitherto comparatively or even entirely inoperative, assume prominence. Diarrhœal complaints reach their maximum destructiveness from about the third to the sixth months, carrying off, however, many victims in each of the twelve. Inherited syphilis covers mainly the first four months, and then decreases very rapidly. Deaths from the irritation of teething begin about the fourth month, but are most numerous in the last three months of the year. Very notable is the comparative immunity of infants in the earlier months from the several zymotic diseases. The earliest to declare itself is Whooping-cough, which is the assigned cause of some deaths even in the first month, but becomes much more frequent later on; next comes Measles, but with no great number of deaths until the eighth or ninth month is reached, after which it takes many victims; while Scarlet-fever is still later in its appearance, and scarcely carries off any infants at all in their first year.

Such are the main facts that manifest themselves in both the rural and the town tables. It remains to point out the most noticeable disagreements. The total mortality, as already stated, is more than twice as great in the towns as in the rural counties. But this excess, though shared by all the causes, is by no means shared by them in equal proportions. The most notable difference is under the heading Diarrhœa. The deaths under this and under Enteritis, taken together, are in the towns 4,458, while in the rural counties they are only 603; that is to say, the mortality from these diseases is more than seven times as great in the towns as in the country. The mortality also from measles and scarlet-fever, the spread of which diseases is greatly favoured by close aggregation, is considerably more than three times as high in the towns as in the counties. Still greater is the excess under Syphilis, an urban disease. Not so great, but still very large, is the urban excess from suffocation, mostly due to overlying in bed. It was shown in the last Annual Report that two or three times as many infants are thus killed on Saturday night as on any other night in the week, the inevitable inference being that the real cause of this accident is the drunkenness of parents; and as such drunkenness is much more common in towns than in country, the difference under this heading in the two tables has a ready explanation. The mortality from Premature Birth is nearly twice as high in the towns as in the rural counties, part of which excess may be ascribed with much probability to the employment of young married women in the textile factories. On the other hand the mortality of infants from Congenital Malformations is, as might be expected, much the same in the counties as in the towns. The differences under the other headings scarcely call for special observation.

Urban and Rural mortality.—The increased mortality in 1891 was shared by both the urban and the rural populations, but affected the latter in larger proportion than the former. For while the death-rate in the Urban Districts rose from 20·3 in the ten years 1881–90, to 21·1 in 1891, the rate in the Rural Districts rose from 17·3 in 1881–90 to 18·5 in 1891. Thus, out of equal numbers living, there died in 1891 in the Urban Districts only 114 persons to 100 in the Rural Districts, while the proportion had been 117 to 100 in 1881–90. (Tables 24. 25.)

Registered Causes of Death.

The deaths, when distributed to the several classes by their assigned causes, gave the rates shown in the following table:—

Table F.—Mortality from the several Classes of Diseases.

Causes of Death.	Total Deaths 1891.	Rate per Million living.

Zymotic or Specific Febrile Diseases.—The deaths ascribed to this class of disease numbered 78,704, and were in the proportion of 2706 to a million persons living, a proportion which was not only higher than that recorded in any one of the six immediately preceding years, 1885–90, but higher than the mean for the whole decennium 1881–90. The excess, as will be seen further on, was due to the great mortality caused by the serious prevalence of influenza, a disease which had also contributed to raise the zymotic mortality, though to a less extent, in the preceding year 1890.

The deaths from *small-pox* were 49, having been 23 and 16 respectively in the two next preceding years. This succession of three years with practically no deaths from small-pox is very remarkable, whatever may be held to be its cause, for only on one previous occasion (1886), since civil registration began, had the deaths from this disease fallen below 500, and only on six occasions below 1000. There were also 91 deaths ascribed to chicken-pox, and it is not impossible that some of them may have been mistaken cases of small-pox. There were, moreover, 43 deaths that were registered as due to the effects of vaccination. The total, however, of all these deaths, namely, those certainly and those possibly caused by small-pox, and those alleged to have been caused by the means taken to diminish the chances of its occurrence, was only 183.

Of the 49 persons whose deaths were registered as due to small-pox, 3 were certified to have been vaccinated, 17 were certified as unvaccinated, while as regards the remaining 29 there was no information on this point in the medical certificate. It is much to be regretted that medical men neglect in so large a proportion of cases to give this very desirable piece of information.

The deaths from *measles* numbered 12,673, and were in the proportion of 436 to a million living, a rate which scarcely differed from the average in the preceding decennium. It will be seen from Table 20 that the distribution of the mortality from measles over the surface of the country was excessively uneven, and the same is the case when the similar tables for former years are examined. These inequalities are to a great degree determined by the varying periods of time that have elapsed since the occurrence of former outbreaks in the respective districts; for when a county or other area has been visited by a severe epidemic there is for several succeeding years scarcely sufficient material, in the shape of unprotected children, for another considerable outbreak, unless it be in very populous areas, such as London or Liverpool; and in such places the disease is endemic.

A comparison of the distribution by counties and districts for a succession of years gives an interesting view of the manner in which this infection spreads over the country. When there has been a severe outbreak in any year in a given area, it will be found that the returns of the next year show, as a rule, a subsidence in the area itself but an extension to the adjoining districts; another year, and these districts also are comparatively free, while a wider circle of surrounding districts has become infected. Thus, in 1890, as shown in the last Annual Report, measles was epidemic in Cheshire and the adjoining parts of South Lancashire and North Staffordshire, but in 1891 the disease had begun to decline in Cheshire, while it had spread to North Lancashire, South Staffordshire, and the West Riding.

In 1889 there was very great prevalence of measles in Devonshire; in 1890 this had subsided, but the contagion had spread to the neighbouring parts of Cornwall on the west, and of Somersetshire on the east, Dorsetshire escaping, notwithstanding its proximity, owing to its having suffered severely in 1888; indeed it may have been from this county that Devonshire received the infection in 1889. In 1891 the disease had practically died out in those parts of Cornwall and Somersetshire that had been affected in 1890, but had spread to the extreme west of Cornwall on the one side and to the remaining parts of Somersetshire, with the contiguous counties of Wiltshire and Gloucestershire.

The deaths from *scarlet fever* numbered 4,959, and were considerably fewer, not only in proportion to population, but absolutely, than in any previous year since civil registration began. For seven successive years, 1885-91, the deaths from this disease have been under 8,000, and have averaged only 6,458, while in no previous year had they even fallen below 11,000, excepting on one occasion, namely, in 1884, that is in the year immediately preceding the seven before mentioned. This large and long-sustained diminution in the mortality from scarlet fever is one of the most curious facts in our death-statistics, and is yet without adequate explanation.

Three possible causes of the change may be suggested. Firstly, there is the low birth-rate of recent years, by which the proportion of children in the population, that is the proportion of those who are most liable to scarlet fever, has been greatly reduced. In 1881 the children under five years of age and between five and ten formed respectively 136 and 121 per 1000 of the population; in 1891 the proportions had fallen to 123 and 117 in the thousand. If, then, we put out of account those few deaths from the disease in question that occur among persons over ten years of age, this cause by itself would account for a reduction of 7 per cent. in the scarlet fever death-rate.

Secondly, improved sanitary conditions must have had some effect, and especially the great increase in the use of isolation by means of hospitals for this disease. Such increase has been especially noticeable in London,

where at the present time 62 per cent. of the scarlet fever deaths occur in the Metropolitan Asylum and London Fever Hospitals, whereas in 1878 the proportion was not more than 7 per cent.

Thirdly, there appears to be reason for believing that the scarlet fever of recent years has been of a comparatively mild type. That the virulence of this disease is very different in different outbreaks is well known. There are times when it is scarcely more than a trifling disorder; there are other times when it becomes a deadly pestilence. So far as can be judged from the case mortality, that is, the proportion of deaths to attacks, in the Asylum hospitals of London, the visitations of recent years have approximated rather to the former than to the latter type. In the years from 1874 to 1878 the average case mortality was 12·88 per 100 attacks, whereas in the years from 1887 to 1891 it fell to 8·56 per 100.

Whether these combined causes are sufficient to have produced the total decline in scarlet fever mortality is at any rate very doubtful, but that they must have contributed not inconsiderably to that result is beyond question.

The deaths from *enteric fever* numbered 4,875, and were in the proportion of 168 per million living, this being the lowest mortality as yet recorded; nor can this be attributed to any confusion between enteric and other forms of continued fever, for the mortality under the two headings Typhus and Simple or Ill-defined fever was in each case also the lowest on record, being respectively 5 and 11 to a million living.

The mortality from enteric fever varied greatly in different counties (Table 20); and while it was below the average for the whole country in London and in the South-Eastern, South Midland, Eastern, South-Western, and most of the West Midland counties, it was above that average in almost all the counties of the North Midland, North-Western, York, and Northern Divisions. In South Wales it was also somewhat above the average, but not so either in North Wales or in Monmouthshire.

It was pointed out in the last Annual Report that there was an area comprising 18 registration districts running along the east side of Northumberland and Durham in which the mortality from enteric fever was not only in great excess in the year 1890, but had been so for several preceding years. The mortality continued to be excessive in this area in 1891, the deaths from enteric fever having been 465 in the year in an estimated population of 1,551,706, or in the proportion of 300 per million living, while the entire rate in all England and Wales as before stated was only 168 per million. In 1890 the enteric death-rate had been above the average for the whole country in 16 out of these 18 districts; in 1891 it was so in 14 of them; and 13 of these 14 districts were also among the 16 with excessive rates in the preceding year.

The deaths ascribed to *diphtheria* numbered 5036, and were in the proportion of 173 to a million persons living. There were, however, also 2638 deaths ascribed to croup, many of which were probably of diphtheritic nature. Of the sixteen counties in which the death-rates from diphtheria were highest, nine, namely, Sussex, Surrey, London, Middlesex, Buckinghamshire, Hertfordshire, Essex, Suffolk, and Norfolk, form a continuous area, corresponding very nearly with what was described in the 47th Annual Report, 1884, as the south-eastern diphtheritic region; while five others, viz., Shropshire, Herefordshire, Monmouthshire, Gloucestershire, and Wiltshire form a second continuous area representing what in that same report was styled the western or Welsh diphtheritic region. By far the highest rate was in London, where it reached 339 per million, while the rate in the remainder of the country was only 145 per million.

The deaths from *whooping-cough*, numbered 13,612, and were in the proportion of 468 to a million living, a rate not materially different from the average of recent years.

Influenza.—This disease, as was set forth in the last Annual Report, was epidemic in this country in the first quarter of 1890, after which scattered cases continued to occur throughout the remainder of the year, and also through the first quarter of 1891. The epidemic then declared itself again with even greater severity than in 1890, and raised the annual death-rate in the second quarter to 23·7 per 1000, which rate was 27 per cent. above the average rate in the second quarters of the ten next preceding years, and had only been equalled on two previous occasions in the last fifty years, namely, in 1847 and 1866.

The deaths ascribed directly to influenza in 1891, numbered 16,686, having been 4,523 in 1890.

The disease fell with most weight upon persons of middle and advanced life, and contributed to raise the death-rate at each age-period after 35, both for males and for females, to the highest point it had reached in any one of the preceding ten years, and with few exceptions to a higher point than any previously recorded since civil registration began. (Tables 11, 12).

The epidemic of 1890–91 was distinguished from the equally fatal epidemic of 1847–48 by the greater comparative severity with which it attacked persons of middle age as the following table shows, in which are given for the two epidemics the deaths ascribed directly to influenza per million living at successive age-periods.

TABLE G.—DEATHS REGISTERED as due to INFLUENZA, per Million living at each Age.

Age Periods.	1847–48.	1890–91.
Under 5.	713	306
5—	80	55
10—	49	46
15—	51	115
25—	79	197
35—	139	347
45—	284	595
55—	809	1,060
65—	2,372	1,985
75—	5,510	3,355
85—	11,243	4,821

But it must not be supposed that the deaths directly attributed to influenza represent in any but the most inadequate degree the mortality really due to the epidemic. As was explained in the last Annual Report very many more deaths, that are really caused by influenza, are ascribed to pneumonia, bronchitis, heart disease, and other secondary effects than to influenza itself; and seeing how varied are these effects, we shall probably not risk any very serious error if we assume that all the extra mortality after the age of 35 in 1890-91, that is to say, all the deaths above those which would have occurred in those two years had the death-rates remained at the averages of the preceding decennium, resulted from influenza either directly or indirectly; and on this assumption we should have to ascribe the loss of no less than 57,980 lives to the epidemics of 1890 and 1891.

The deaths attributed to *diarrhœal complaints* numbered 13,962, and were in the proportion of 480 per million persons living. In 1879 and 1888 the rate had been much the same; but with these exceptions the rate in 1891 was lower than any recorded in the last 45 years. The main cause of this was the low temperature that prevailed in the months of July and August.

Only 7 deaths were caused by *hydrophobia*, the number in the next preceding year having been only 8. With the single exception of 1868, when the number was also 7, these were far the lowest figures yet recorded, the yearly average in the 20 years, 1870–89, having been 40.

The deaths attributed to *puerperal fever* were 1973, and, if to these be added 2814 other deaths from the various accidents of childbirth, we have a total of 4787 deaths, giving a mortality of 5·24 to 1000 registered births, which was a higher rate than in any year since 1875.

Parasitic Diseases.—The deaths classed in this division numbered 658; and of these, 534 were ascribed to thrush and 124 to other parasitic diseases, the figure in each case being the lowest as yet recorded.

The deaths in this class represent, however, only a very minute fraction of the mortality that is really caused by parasitic organisms, and even that fraction is very inaccurately represented. For while the 534 deaths attributed to thrush are scarcely to be ascribed to the parasitic oidium which characterises that ailment, but are rather deaths of ill-nourished and cachectic children in whose mouths the comparatively harmless oidium has found suitable conditions for development, the 124 other deaths are only those which are caused by worms and other parasites of comparatively gross size.

But the researches of modern pathologists have shown that many other diseases, grouped in other classes, are certainly determined by microscopic organisms that find access to the body either by inhaled air, or by food, solid or liquid, or by simple deposition on a wounded, or even in some cases, on an unbroken surface; and further that there are many other very destructive diseases in which a similar condition, though it cannot be directly demonstrated, yet may by analogy be inferred with the highest degree of probability. If the term "parasitic" be extended to all these diseases, the class will include not only those now placed under it but all the "Specific febrile or zymotic diseases," with the exception perhaps of diarrhœal diseases, and not only these but all the deaths ascribed to the various forms of tuberculosis, many of those ascribed to pneumonia, and all those which are brought about by tetanus. The total deaths from parasites, exclusive of those from pneumonia and perhaps some other diseases, would then for the year 1891 amount to no less than 132,489, or not far from one fourth of the mortality from all causes.

Dietetic Diseases.—The deaths directly ascribed to intemperance were 2055, and in the proportion of 71 to a million living; a higher rate than in any other year in the table. (Table 16.)

Constitutional Diseases.—Of the important diseases in this class, cancer and diabetes showed, as usual, an increase of mortality; the deaths from the former being 20,117, and the rate per million 692; while for the latter the deaths were 1930, and the rate 66 per million; in each case the rate being the highest on record.

On the other hand, the deaths from phthisis, numbering 46,515, were in the proportion of 1599 per million, which was a lower rate than in any previous year, with the exceptions of 1888 and 1889. The apparent arrest, in 1890 and 1891, of the almost continuous decline in phthisis mortality is probably attributable to the epidemic of influenza, which carried off many phthisical persons at an earlier stage than would otherwise have been the case.

Developmental Diseases.—The deaths ascribed to Old Age without further specification of cause were 29,417, or 1011 per million persons living of all ages. This was a considerably higher rate than that of recent years, and is probably attributable to the influenza epidemic.

Attention has again to be called to the constantly increasing frequency of deaths from premature birth, and also, in a less degree, from congenital defects, under both of which headings the mortality in 1891 as compared with the registered births was at its maximum, as will be seen in the following table.

TABLE H.—PREMATURE BIRTHS and CONGENITAL DEFECTS.—Deaths to 1000 Births, 1861–1891.

Year.	Premature Births.	Congenital Defects.
1861–65	11·19	1·76
1866–70	11·50	1·84
1871–75	12·60	1·85
1876–80	13·38	2·39
1881	13·63	3·20
1882	13·99	3·31
1883	14·45	3·08
1884	14·42	3·15
1885	14·43	3·41
1886	15·09	3·33
1887	15·89	3·29
1888	15·98	3·45
1889	16·30	3·41
1890	17·48	3·46
1891	18·00	3·60

Local Diseases.—The most noticeable feature presented by the diseases included in this class was the great increase of mortality from Diseases of the Circulatory and of the Respiratory Systems. The deaths from the former were 53,085, and from the latter, exclusive of croup, 130,128; the rates respectively being 1826 and 4474 per million living, and in each case the highest on record. The explanation again is doubtlessly to be found in the prevalence of epidemic influenza. The deaths from Diseases of the Nervous System, however, showed no such increase. They numbered 50,795, exclusive of convulsions, and were in the proportion of 1748 to a million living; and this rate differed but little from those of the three next preceding years. The mortality from Diseases of the Urinary System was 467 per million living, this being the highest rate yet recorded, and marking a further step in the almost continuous increase shown for a long series of years under this heading.

Violence.—Advantage has been taken of the opportunity afforded by the commencement of a new decennium to revise the classification of violent deaths, and to make it as ætiological as the imperfect information would allow (pp. 193–205). A completely ætiological classification is not, however, possible, for even the primary division into accident, suicide, homicide, execution, cannot in all cases be maintained with certainty. Thus, in 1891 no fewer than 1,034 persons were stated by coroners' juries to have been "found drowned"; and what proportions of these deaths were due severally to accident, to suicide, or to murder, is unknown. The rule followed, however, is, and has always been, to consider all such uncertain deaths as accidental.

The deaths tabulated in the year under Accident numbered 16,688, or 574 per million persons living, this rate being somewhat, but not much, in excess of the previous decennial average, which had been 562. The deaths ascribed to suicide were 2483, the rate per million living being 85, and the highest on record. To homicide 315 deaths were ascribed by juries, the verdict in 185 of these being "murder," in 128 "manslaughter,

and in 2 "justifiable homicide." For the 185 murders there were 14 executions.

Ill-defined and Unspecified Causes.—In 26,140 cases, or 4·4 per cent. of the total deaths, the cause of death was so inadequately stated that the death had to be referred to this class; the proportion was slightly less than in 1890, in which it had been 4·6 per cent. The decline was doubtlessly in part due to the 3460 letters of inquiry concerning doubtful cases which were sent to medical men: the result of this process being to transfer a large number of cases from ill-defined to definite headings. Thus, for instance, 505 deaths were removed from more or less vague headings to Cancer or Malignant Disease, 91 to Syphilis, and 198 to Puerperal Fever and Accidents of Childbirth.

Certification of Causes of Death.—Of the 587,925 deaths registered during the year 1891, the causes of 539,341, or of 91·8 per cent., were certified by registered medical practitioners; and the causes of 32,432, or of 5·5 per cent., by coroners after inquest, while the causes of the remaining 16,152 deaths, or of 2·7 per cent., were not certified, this last per-centage showing a further step in the progressive decline which has been noted in previous reports. The 16,152 uncertified cases in 1891 included deaths of infants who had been attended only by midwives, and of persons attended by unregistered practitioners, as well as of persons who had had no medical attendance of any kind in their last illness. In registration counties the proportions per cent. of uncertified deaths ranged from 0·7 in Middlesex, and 1·1 in London, in Wiltshire, and in Monmouthshire, to 4·4 in South Wales, 4·5 in Durham, 5·1 in Herefordshire, 5·8 in North Wales, and 6·2 in Huntingdonshire. Among counties in which the proportion of uncertified deaths was greater in 1891 than in 1890 were Surrey, Hertfordshire, Northamptonshire, Suffolk, Worcestershire, the East Riding of Yorkshire, and Westmorland; while considerable decrease was shown in Shropshire, Rutlandshire, Derbyshire, Cheshire, Monmouthshire, and North and South Wales.

Offences against the Registration Act of 1874.—In 1891, 27 persons, on prosecution by order of the Registrar-General, were convicted of different offences against the Registration Acts, as under:—

For failing to give information for registration, and to comply with registrars' requisitions	3
For giving false information for registration	11
For giving false declarations of still-birth	3
For making and giving false certificates of cause of death	6
For burying and permitting to be buried as still-born, children born alive	3
For refusing to give particulars for registration	1
	27

Progress of Registration.

The names in the alphabetical indexes of births, deaths, and marriages recorded in the national register of England and Wales were increased in the year 1891 by 1,955,134, this addition raising the aggregate number of names in the indexes, which at the end of 1891 embraced a period of 54½ years, to 83,219,638. The number of searches in 1891 in the various registers was 46,500, exceeding the number in the previous year by 2626. The number of certificates issued was 32,711, showing an increase of 1025 on the number in 1890. The fees received for searches and certificates in 1891 and paid into Her Majesty's Exchequer amounted to 6,458*l.* 10*s.* 6*d.*

exceeding the amount received in the previous year by 280*l.* 6*s.* 6*d.* (Table 26.)

A list of the various public registers and records lodged in the General Register Office, Somerset House, was published in the 34th Annual Report, pages xxi–xxii.

Mortality in the Army.*

The average strength of the Army, at home and abroad, was 209,699, and the deaths were 1869, the rate of mortality thus being 8·9 per 1000, against 9·3 and 8·7 respectively in the preceding two years. The mortality in the Army abroad was 12·5 per 1000, a rate practically equal to the mean rate in the three years 1888–90; while the rate in the Army at home was 5·4 per 1000, against 5·0 and 6·0 in the preceding two years. (Table 29.)

Mortality in the Navy.†

The average force afloat in 1891 was 55,670. The deaths were 344, being in the proportion of 6·18 per 1000 of the strength. Of the 344 deaths, 261 were due to disease, and 83 to violence; the death-rate from disease was therefore 4·69 per 1000, and that from violence 1·49 per 1000.

Of the 83 deaths from violence, 45 resulted from accidental drowning, 7 from heatstroke, 27 from other accidental causes, and 4 from suicide.

Births and Deaths of British Subjects at Sea.

Marine Register Book.—In accordance with the Births and Deaths Registration Act of 1874, commanding officers of ships, trading to or from British ports, are required, under a penalty, to transmit returns of all births and deaths occurring on board their ships to the Registrar-General of Shipping and Seamen, who furnishes certified copies of such returns to the Registrars-General of England, Scotland, and Ireland. Similar returns are furnished by persons having charge of Her Majesty's Ships directly to the Registrars-General of Births and Deaths. Such returns of births and deaths at sea constitute the "Marine Register Book." During the year 1891, 268 entries of birth and 4218 of death were added to this Register. Of the 4218 deaths, so far as could be judged from the entries, which are not always very precise, 1704 were of persons of English origin, while 164 others were of persons of British origin.

Mercantile Marine.—The Registrar-General of Shipping and Seamen reports that the number of masters and seamen afloat in registered vessels belonging to the mercantile marine of the United Kingdom, including the islands in the British Seas, during the year 1891 was 240,480, showing an increase of 4372 upon the number in the preceding year. The reported deaths among masters and seamen during 1891 numbered 3263, showing a rate of 13·6 per 1000 of the strength; this was, with one exception, the lowest rate on record, and was 1·1 per 1000 less than the mean rate in the five years 1886–90. (Table 31.)

Among *passengers* on board merchant vessels at sea 87 births and 386 deaths were reported in 1891, the births being 21 and the deaths 129 below the numbers recorded in the preceding year. (Table 32).

* Based upon returns furnished by His Royal Highness the Commander-in-Chief.

† Based upon returns furnished by the Director-General of the Medical Department of the Navy.

International Vital Statistics.

In Tables 39–56 will be found international vital statistics relating to most of the principal European States. As the sex and age distribution of the population differs greatly in different countries, and as the rates largely depend upon such distribution, as has been repeatedly pointed out in previous reports, the rates in one country cannot be safely compared with the rates in another, without correction.

In order to allow fair comparison, it is most desirable that the various countries should agree upon some standard population, that is a population with fixed sex and age distribution, for international use; and should calculate their birth, marriage, and death rates by such standard.

A comparison of the death rate in 1891, in each country from which returns are received, with the death rates in preceding years, shows that the general rise in mortality, which had been noted in my Fifty-third Report, was maintained in Denmark, the Netherlands, Belgium, and France, and to a lesser degree in Switzerland and Italy, while the rates in Austria and the German Empire fell from the high levels they had reached in 1890 to nearly the same figures as in the preceding year.

I have the honour to be,

Sir,

Your faithful Servant,

BRYDGES P. HENNIKER,

General Register Office, Somerset House, *Registrar-General.*

30th November 1892.

Remarks on the Meteorology of the Year 1891.*

By James Glaisher, Esq., F.R.S., &c.

The following remarks, both with regard to atmospheric pressure and temperature, are based on observations made near London, but they may be taken as having a general application.

Atmospheric Pressure.—The readings of the barometer were above their averages till the 19th of January, being particularly so on the 11th, 12th, and 13th, when it was as much as 0·78 in., 0·71 in., and 0·73 in. respectively above its average, the mean daily excess for the 19 days being 0·41 inch; from January 20th to the 24th it was below, the mean daily deficiency being 0·32 in.; from January 25th to March 5th it was above, being particularly so from February 2nd to the 6th and from the 14th to the 18th of February, when on all these days it was nearly as much as three quarters of an inch above its average, the mean daily excess for the 40 days ending March 5th being 0·36 in.; from March 6th to April 8th it was generally below, being as much as three quarters of an inch below on the 10th and 11th of March, the mean daily efficiency for the 34 days being 0·26 in.; from April 9th to May 14th it was generally above, the mean daily excess being 0·07 in.; from May 15th to June 10th it was below, the mean daily deficiency being 0·20 in.; from June 11th to the 22nd it was above, the mean daily excess being 0·25 in.; from June 23rd to July 8th it was generally below, the mean daily deficiency being 0·14 in.; from July 9th to the 26th it was generally above its average, the mean daily excess boing 0·05 in.; from July 27th to September 7th it was generally below, the mean daily deficiency being 0·15 in.; from September 8th to October 5th it was generally above, the mean daily excess for these 28 days being 0·05 in.; from October 6th to the 26th it was generally below, being particularly so on the 21st and 22nd, when it was as much as 0·65 in. and 0·72 in. respectively below its average, the mean daily deficiency for the 21 days being 0·24 in.; from October 27th to November 8th it was above, being particularly so on 30th and 31st of October and the 1st and 5th of November, when it was as much as 0·65 in., 0·70 in., 0·60 in., and 0·64 in. respectively above its average, the mean daily excess for the 13 days ending November 8th, being 0·44 in.; from November 9th to December 16th it was generally below, being particularly so on the 11th, 13th, 14th, and 15th of November, and on the 10th and 13th of December, when it was as much as 1·30 in., 0·85 in., 0·67 in., 0·78 in., 0·77 in., and 0·80 in. respectively below its average, the mean daily deficiency for the 38 days ending December 16th being 0·24 in.; from December 17th to the 24th it was particularly above its average, the mean daily excess being 0·51 in.; and from December 25th to the 31st it was below, the mean daily deficiency being 0·27 in.

The highest reading of the barometer at the height of 150 feet above the sea was 30·538 ins. on February 5th, and the lowest was 28·269 ins. on November 11th; the yearly range was 2·269 ins.

Temperature.—The temperature of the air was below its average till the 22nd of January, being particularly so on the 10th and 11th, when it was as much as 18°·7 and 14°·8 respectively below, while on other days the temperature varied from 0°·9 below on the 14th to 13°·1 below on the 18th, the mean daily deficiency for the 22 days being 7°·9; from January 23rd to February 8th it was generally above, being particularly so on the 24th, 28th, 29th, and 31st of January, when it was as much as 9°·3, 7°·3, 7°·5, and 7°·0 respectively above its average, the mean daily

* For Meteorological Tables, *see* pp. lxii–lxvii.

excess for the 16 days ending February 8th being 3°·9; from February 9th to the 26th it was generally below, the mean daily deficiency being 2°·8; from February 27th to March 7th it was above, being particularly so on the 1st, 2nd, and 5th of March, when it was as much as 7°·8, 11°·0, and 8°·5 respectively above its average, the mean daily excess for the 9 days being 4°·4; from March 8th to May 6th it was generally below, being particularly so on the 10th, 11th, 12th, 22nd, and 30th of March, and on the 1st, 8th, 13th, 14th, 25th, and 26th of April, the mean daily deficiency for these 11 days being 8°·1, and the mean daily deficiency for the 50 days ending May 6 being 4°·3; from May 7th to the 14th it was above, being as much as 7°·6 and 10°·9 above its average on the 12th and 13th respectively, the mean daily excess for the 8 days being 3°·5; from May 15th to the 30th it was below, being particularly so on the 16th, 17th, 18th, 19th, 21st, 24th, 25th, and 27th days, when it was as much as 12°·5, 14°·0, 13°·7, 7°·5, 9°·5, 9°·2, 12°·5, and 7°·4 respectively above its average, the mean daily deficiency for the 16 days ending May 30th being 8°·0; from May 31st to June 5th it was above, the mean daily excess being 2°·0; from June 6th to the 16th it was below, being as much as 8°·0 below on the 12th, the mean daily deficiency being 2°·9; from June 17th to the 30th it was above, being as much as 8°·1 above on the 18th, the mean daily excess being 3°·2; from July 1st to September 7th it was generally below, being particularly so on the 28th, 29th, and 30th of July, and on the 4th and 6th of August, when it was as much as 8°·7, 9°·3, 8°·4, 9°·0, and 9°·5 respectively below its average, the mean daily deficiency for the 69 days ending September 7th being 2°·5; from September 8th to the 30th it was generally above, the mean daily excess being 2°·2; from October 1st to November 10th it was generally below, being as much as 9°·6 below on the 31st of October, and 7°·5 on the 30th of October, the mean daily deficiency for the 41 days being 0°·6; from November 11th to the 20th it was above its average, being as much as 11°·2 above on the 19th, the mean daily excess being 3°·5; from November 21st to the 30th it was generally below, the mean daily deficiency being 4°·1; from December 1st to the 16th it was generally above, being particularly so on the 4th, 5th, and 10th days, when it was as much as 10°·8, 10°·0, and 8°·4 respectively above, the mean daily excess for the 16 days being 4°·1; from December 17th to the 25th it was below, being particularly so from the 19th to the 25th, the mean daily deficiency for these 7 days being 13°·5, and for the 9 days, viz., from December 17th to the 25th the mean daily deficiency was 11°·8; and from December 26th to the 31st it was above, being particularly so on the 29th, 30th, and 31st when it was as much as 9°·1, 10°·7, and 12°·5 respectively above its average, the mean daily excess for the 6 days ending December 31st being 6°·4.

The highest temperatures of the air were at the Royal Observatory 85°·1, at Camden Square 84°·3, and at Salisbury 84°·0; and the lowest were 4°·0 at both Cambridge and Somerleyton, and 7°·5 at Barnet.

Rainfall.—The fall of rain was below its average in both January and February, and above its average in March; the total fall in the three months at Greenwich was 3·75 ins. or 1·22 in. below the average. The fall of rain was below its average in April, above in May, and below its average again in June. The total fall in the three months at Greenwich was 4·37 ins., or 1·43 in. below the average. The fall of rain was above its average in both July and August, and below its average in September. The total fall for the three months at Greenwich was 7·93 ins., or 0·63 in. above the average. The fall of rain was above its average in October, below in November, and above its average again in December. The total fall for the three months at Greenwich was 9·00 ins., or 1·95 in. above the average.

The heaviest falls of rain in the year at our stations were at Bath 50·92 ins., at Stonyhurst 47·51 ins., and at Torquay 46·88 ins.

The least falls were at the Royal Observatory 25·05 ins., at Blackheath 25·10 ins., and at Leeds 25·12 ins.

The greatest number of days of rain were at Nottingham 219, at Truro 207, and at Hull 202; and the smallest number of rainy days were at Barnet 150, at Osborne 155, and at Barnstaple 156.

Thunderstorms occurred on 61 days at the different stations during the year; of these, 13 were in July, 11 in August, 9 in June, 7 in October, 6 in May, 5 in December, 3 in September, 2 in each of the months of January, April, and November, one in March, and none were reported in February.

Thunder was heard but lightning was not seen on 69 days during the year; of these, 15 were in July, 13 in June, 10 in both May and August, 7 in October, 5 in September, 3 in both March and April, and one in each of the months of January, February, and December.

Lightning was seen but thunder was not heard on 36 days during the year; of these, 7 were in June, 6 in December, 5 in October, 4 in both July and August, 3 in both May and September, 2 in November, and one in both January and April.

Solar halos were seen on 95 days during the year; of these, 15 were in June, 14 in May, 10 in September 9 in both April and December, 8 in March, 7 in November, 6 in both July and October, 5 in January, 4 in August, and 2 in February.

Lunar halos were seen on 41 days during the year; of these, 8 were in both January and November, 7 in December, 5 in October, 4 in April, 3 in March, 2 in May, and one in each of the months of February, June, August, and September.

Snow fell on 56 days during the year; of these, 22 were in March, 17 in January, 6 in both December and May, 3 in April, 2 in November, and one in February. The last fall in the spring was on May 18th at Royston, Hereford, and Cambridge; none fell in June, July, August, September, or October; and the first fall in the autumn was on the 25th of November at Liverpool and Leeds.

Hail fell on 87 days during the year; of these, 19 were in March, 13 in May, 10 in January, 9 in December, 8 in both April and November, 7 in October, 6 in August, 4 in July, 2 in September, and 1 in June.

Fog prevailed on 159 days during the year; of these 24 were in February, 20 in November, 17 in January, 16 in both April and June, 15 in December, 11 in both May and July, 9 in both September and October, 7 in March, and 4 in August.

* Deaths from Relapsing Fever prior to 1869 were classed with "Simple and Ill-defined Fever," and deaths from Cerebro-spinal Fever prior to 1877 were classed with Typhus, but, since those dates, have been included under this heading.

† Deaths of children under 5 years of age from Remittent Fever were classed with Enteric Fever from 1869 to 1880, but in previous and subsequent years have been included under this heading.

TABLE 15 *(continued)*.—ENGLAND.—**Deaths from Various Causes, 1867–91.**

* The prices of Consols for the years 1840–52 relate to the 12 months beginning 1st April; from 1853 onwards the prices relate to calendar years. For the years 1840–88 the prices relate to stock bearing 3 per cent. interest, for 1889–91 to stock bearing 2¾ per cent.

† From the Board of Trade Statistical Abstract.

‡ The prices of coal are derived from Parliamentary Returns furnished by the Registrar of the London Coal Market, by order of the House of Commons.

§ Derived from Returns, published by the Local Government Board, of the number of persons in receipt of Relief on the last day of each week.

INTERNATIONAL VITAL STATISTICS.

NOTE.—An addition of territory containing a population of about 8000 was made in 1864, and the facts relating thereto are included in this Table from 1860. Previously to 1st January 1860, children who died within 24 hours after birth were counted as still-born.

* Census year.

† Cholera was epidemic in the year 1853, and war raged in the years 1850 and 1864.

NOTE.—The population in the four years 1862-65 and in the years 1867-69 is estimated by means of the average annual rate of increase observed between the two enumerations of 1861 and 1866. The deaths of Frenchmen abroad, civil or military, are registered in the books of the Commune in which they were last domiciled.

* Census year. † Cholera prevailed in 1865-66, and war raged in 1870 and 1871.

NOTE.—The numbers for Rome were first included with those for the Kingdom of Italy in 1872. The population figures given for census years show the numbers enumerated on 31st December in each of those years; whereas for the end of each of the other years the population is estimated on the assumption that the rate of increase which prevailed in the last inter-censal period has since been maintained.

* Census year.

TABLE 57.—ENGLAND. **Changes** in the **Constitution** of **Registration Districts** and **Sub-districts** during the Year **1891.**

N.B.—(1.) The Name of the District is in SMALL CAPITALS, that of the Sub-district in *Italics*.
(2.) The Populations quoted are the unrevised Numbers enumerated at the Census of 1891.

No. of District.	NAME OF REGISTRATION DISTRICT.	Date of Change.	Nature of Change.
		1891.	
13	HOLBORN - - -	1 July -	The sub-districts of *Old Street* and *City Road* were united under the name of *City Road* (population 29,148).
27	GREENWICH - -	1 September	The two sub-districts of *St. Paul Deptford* and *St. Nicholas Deptford* were dissolved, and their constituent parts re-arranged into three sub-districts as follows:—1. *Deptford North* sub-district, embracing the area between the river Thames and the Greenwich Branch of the South Eastern Railway, and also including the old sub-district of *St. Nicholas Deptford*, (population 35,314); 2. *Deptford Central* sub-district consisting of the area between the Greenwich Branch of the South Eastern Railway and the line of thoroughfare represented by the Queen's Road, New Cross Road, and the Broadway, Deptford (population 42,007); and 3. *Deptford South* sub-district, consisting of the remaining part of the old sub-district of *St. Paul Deptford* (population 30,852). The sub-districts of *Greenwich West* and *Greenwich East* were re-renumbered 4 and 5.
71	HAILSHAM - -	1 September	The parishes of Arlington and Hailsham (aggregate population 4,017) were transferred from the *Hailsham* sub-district to that of *Hellingly*, and the parishes of Warbleton and Heathfield (aggregate population 3,681) were transferred from the sub-district of *Hellingly* to that of *Hailsham*. The name of *Hailsham* sub-district was changed to *Hurstmonceaux*.
118	BRADFIELD - -	1 January -	The sub-district of *Mortimer* was dissolved, and of its constituent parishes Beenham-Valence, Aldermaston, Padworth, and Ufton Nervet (aggregate population 1,753) were added to *Bucklebury* sub-district, and the remaining parishes, viz.: Stratfield Mortimer, Wokefield, Beech Hill, Sulhampstead Banister Lower End, Sulhampstead Banister Upper End, Sulhampstead Abbots, Grazeley or Grasley, and Burghfield (aggregate population 3,615) were added to *Tilehurst* sub-district. The sub-districts of *Bucklebury* and *Tilehurst* were re-numbered 1 and 2.
164	KETTERING - -	1 January -	The parishes of Broughton and Cransley (aggregate population 1,293) were transferred from the sub-district of *Rothwell* to that of *Kettering*.
174	WOBURN - -	1 January -	The sub-districts of *Toddington* and *Woburn* were united under the name of *Woburn* (population 9,277).
186	WEST HAM - -	1 May -	The sub-district of *West Ham* was divided into three sub-districts as follows:—2. *Plaistow* sub-district consisting of the Plaistow Municipal Ward (population 57,848); 3. *Canning Town* sub-district consisting of the Canning Town Municipal Ward (population 54,750); and 4. *Forest Gate* sub-district consisting of the remaining portion of the sub-district of *West Ham* (population 49,322). The sub-districts of *East Ham*, *Leyton*, and *Walthamstow* were re-numbered 5, 6, and 7.
218 & 219	MUTFORD and YARMOUTH.	1 July -	The parish of Gorleston (population 11,736) was transferred from the MUTFORD Registration District to that of YARMOUTH and constituted a separate sub-district under the name of *Gorleston*; and the parishes of Somerleyton, Herringfleet, Ashby, and Lound (population 1,247), which were formerly in the *Lowestoft* sub-district, together with the parishes of Belton, Bradwell, Burgh Castle, Fritton, and Hopton (population 2,364), which were formerly in the old sub-district of *Gorleston*, were constituted a separate sub-district, and called the *Belton* sub-district. The sub-districts of YARMOUTH were re-numbered thus:—1. *Yarmouth Southern*; 2, *Yarmouth Northern*; and 3. *Gorleston*.

Table 57.—ENGLAND. Changes in the Constitution of Registration Districts and Sub-districts during the Year 1891—*continued.*

No. of District.	NAME OF REGISTRATION DISTRICT.	Date of Change.	Nature of Change.
		1891.	
251	WARMINSTER - -	1 September	The parishes of Bishopstrow, Sutton Veney, and that part of the parish of Norton Bavant in the *Longbridge Deverill* sub-district (aggregate population 1,153) were transferred to the *Warminster* sub-district.
271	ST. THOMAS - -	1 September	The sub-districts of *St. Thomas* and *Alphington* were united under the name of *St. Thomas* (population 12,909). The sub-districts of *Christow* and *Kenton* were re-numbered 8 and 9.
284	SOUTH MOLTON - -	11 November	The parishes of North Molton and Twitchen (aggregate population 1,521) were transferred from the *South Molton* sub-district to that of *Witheridge.*
287	BIDEFORD - -	1 September	The parish of Littleham and the detached part of the parish of Northam called Northam Ridge (aggregate population 377) in the sub-district of *Northam* were transferred to the *Bideford* sub-district.
446	RUNCORN - - -	1 August -	The sub-districts of *Budworth* and *Daresbury* were united under the name of *Budworth* (population 8,332). The sub-districts of *Runcorn* and *Frodsham* were re-numbered 2 and 3.
579	KENDAL - - -	9 October -	The parish of Natland (population 464) was transferred from the sub-district of *Kendal* to that of *Grayrigg.*

NOTE.—No change affecting the population of any Registration District or Sub-district was made in 1891 by order of the Local Government Board under the provisions of the Divided Parishes and Poor Law Amendment Acts, 1876 and 1879, or by order of any County Council under the provisions of the Local Government Act, 1888.

* The *Registration Counties* consist of groups of Registration Districts, which are generally co-extensive with the Poor Law Unions. A District which extends into two or more Geographical Counties is included entirely in that Registration County in which the principal town of the District, or the greater part of the population, is located. The boundaries of the Registration Counties differ therefore more or less from the boundaries of the Geographical Counties. For areas and populations of the Registration Divisions and Counties, *see* pages 64-67.

† On 1st July 1891, the parish of Gorleston was transferred from the Registration County of Suffolk to the Registration County of Norfolk. The numbers of Births and Deaths are shown as if the change had been made at the beginning of the year. *See also* note ‡, p. 64.

* The 632 *Registration Districts* (Paddington 1a and Holyhead 631 having been constituted Registration Districts since the numerical arrangement 1 to 630 was adopted on 1st January 1881) are collections of contiguous Parishes or Places combined for purposes connected with the Registration of Births, Deaths, and Marriages, and are nearly always identical with the Poor Law Unions of the same names; they are arranged, according to the local position, under the Registration Counties. The Registration Sub-districts (2125 in number at the end of the year 1891) are sub-divisions of Registration Districts, within which the Births and Deaths are registered by Registrars severally appointed for that purpose. The letter *W* denotes that the Sub-district contains within its limits a Workhouse Establishment belonging to the District or Union; *w* indicates that a Workhouse Establishment receiving inmates from other Districts than the one in which it stands is included; *H* indicates a Hospital or Infirmary; *L* a Lunatic Asylum; and repetitions of these letters show the number of such Institutions in each Registration sub-district.

† The Deaths in the principal Institutions in England in 1891 are given on pages 71-94.

* *See* note * on page 2.

† These areas, corrected for changes in Registration Counties, are the same as those published in the Census Report of 1891. They do not include space occupied by foreshore or tidal water of rivers and creeks.

‡ On 1st July 1891 the parish of Gorleston was transferred from the Registration County of Suffolk to that of Norfolk. The marriages in this parish from 31st January to 30th June are included in the County of Suffolk, and those in the remainder of the year in the County of Norfolk. The areas and populations of the two Counties are shown as they existed after the change was made.

CIVIL CONDITION; AGE; SIGNATURE OF REGISTER.

MARRIAGES. Registered in the Quarter ending the last day of: March.	June.	September.	December.	Contracted between*: Bachelors and Spinsters.	Bachelors and Widows.	Widowers and Spinsters.	Widowers and Widows.	Of: Widowers.	Widows.	Of Persons not of Full Age: Men.	Women.	Signed the Marriage Register with Marks: Men.	Women.	Cases in which: Both signed.	One signed. DEATHS IN WORKHOUSES, HOSPITALS, AND PUBLIC LUNATIC ASYLUMS.

1891.

THE following Table shows the numbers of deaths (Persons, Males, and Females) registered during 1891 in the Workhouses, Hospitals, and Public Lunatic Asylums of England. These figures afford the means of correcting the mortality of districts and sub-districts in which these Institutions are situated. The Table includes 1851 Institutions; of which 747 are Workhouses, Workhouse Infirmaries, or Workhouse Schools; 1012 Hospitals or Infirmaries; and 92 Lunatic Asylums. The Lunatic Asylums are mostly County Asylums, but a few private Asylums which receive pauper patients (held on that account to be public for the purposes of this Table) are also included. In these 1851 Institutions 68,841 deaths were registered during the year, or 11·7 per cent. of the total deaths in England and Wales, against 11·2 and 11·6 per cent. in the preceding two years; 42,145 occurred in Workhouses, 20,442 in Hospitals, and 6254 in Lunatic Asylums. The proportion to total deaths was 7·1 per cent. in Workhouses, 3·5 in Hospitals, and 1·1 in Lunatic Asylums. The proportion of deaths recorded in Workhouses, which had been 6·6 and 7·0 per cent. in 1889 and 1890, further rose to 7·1 per cent. in 1891.

Information relating to the deaths recorded in many Private Lunatic Asylums, Private Asylums for Idiots and Imbeciles, and in a few other institutions, will be found in the notes to the following pages.

Deaths in Workhouses, Hospitals, and Public Lunatic Asylums, 1891.

* When a person dies from an operation performed on account of any disease or injury the nature of which is stated in the certificate, the death is classed under that disease or injury.

OF the above 11,799 ACCIDENTS, 176 are stated to have occurred to Men in a state of INTOXICATION, and 5 to Men suffering from DELIRIUM TREMENS. And in 278 other cases Death was accelerated by the supervention of ERYSIPELAS, MORTIFICATION, PYÆMIA, or TETANUS. Here follow the details:—

CAUSES INDUCING OR ACCELERATING DEATHS FROM ACCIDENT.	ALL AGES.	Total under 1 Year. Infants under 1 Month.	Others.	1–	2–	3–	4–	Total under 5 Years.	5–	10–	15–	20–	25–	35–	45–	55–	65–	75–	85 and upwards.
Intoxication at time of Accident	176	–	–	–	–	–	–	–	–	–	5	12	35	38	44	29	11	2	–
Delirium Tremens ditto	5	–	–	–	–	–	–	–	–	–	–	–	2	1	1	1	–	–	–
Acceleration by Erysipelas	23	–	1	–	–	–	–	1	1	–	1	–	–	2	15	3	3	6	1
Acceleration by Mortification	8	–	–	–	–	1	–	1	–	1	–	–	–	–	1	3	1	1	–
Acceleration by Pyæmia	123	1	–	2	–	2	–	5	6	8	5	9	17	16	23	16	17	1	–
Acceleration by Tetanus*	114	–	–	–	4	1	2	7	13	13	12	9	22	22	6	6	2	2	–

* Cases of tetanus which are not stated to be the result of injury are classed as "Idiopathic Tetanus" in the Table of Causes of Death (*see* page 114).

* When a person dies from an operation performed on account of any disease or injury the nature of which is stated in the certificate, the death is classed under that disease or injury.

OF the above 4889 ACCIDENTS, 72 are stated to have occurred to Women in a state of INTOXICATION, but not one to Women suffering from DELIRIUM TREMENS. And in 74 other cases Death was accelerated by the supervention of ERYSIPELAS, MORTIFICATION, PYÆMIA, or TETANUS.* Here follow the details:—

CAUSES INDUCING OR ACCELERATING DEATHS FROM ACCIDENT.	ALL AGES.	Total under 1 Year.		1–	2–	3–	4–	Total under 5 Years.	5–	10–	15–	20–	25–	35–	45–	55–	65–	75–	85 and upwards.
		Infants under 1 Month.	Others.																
Intoxication at time of Accident	72	–	–	–	–	–	–	–	–	–	–	–	11	18	22	15	6	–	–
Acceleration by Erysipelas	14	–	–	–	1	–	–	1	–	–	–	–	–	2	1	4	2	4	–
Acceleration by Mortification	7	–	–	–	–	–	–	–	–	–	–	–	1	–	3	–	–	2	1
Acceleration by Pyæmia	32	–	1	–	1	–	1	3	2	1	2	1	2	3	3	6	5	4	–
Acceleration by Tetanus*	21	–	–	–	1	–	1	2	5	3	2		2	3	1	3	–	–	–

* Cases of Tetanus which are not stated to be the result of injury are classed as "Idiopathic Tetanus" in the Table of Causes of Deaths (see page 115).

INDEX OF REGISTRATION DISTRICTS.

The following Index furnishes a reference to the *Number* of each REGISTRATION DISTRICT in the topographical arrangement adopted in the Tables of Abstracts contained in the Report.* The alphabetical arrangement places compound names in the order in which they are pronounced: thus, East Ashford will be found under the letter E, and *not* under A.

In consequence of numerous alterations (amalgamations of districts and formations of new districts) since the numerical arrangement, 1 to 623, was adopted in the Abstracts for the year 1847, the districts were re-numbered consecutively from 1 to 630 in the Abstracts for the year 1881. Since that date two new Registration Districts have been formed, the District of Kensington (1) having been divided into Paddington (1*a*) and Kensington (1*b*), and the District of Anglesey (630) into Anglesey (630) and Holyhead (631).

For names of Towns, such as Leamington, Torquay, &c., which are not found in this "Index of Registration Districts," see the "Index of Registration Sub-districts" (pp. 208–217) *and "Index of certain Towns"* (pp. 218, 219).

INDEX OF REGISTRATION SUB-DISTRICTS.

[This alphabetical arrangement places the Registration Sub-Districts (or Registrars' Districts) having *compound names* in the order indicated by the usual pronunciation of those names; thus, East Grinstead will be found under the letter E, and not under G; St. James under the letter S, and not as "James, St." The number against each Sub-District, in the third column, refers to its numerical place in the Tables of Abstracts; thus, Abbey Holme (573; 2) is the 2d Sub-District of the Wigton District, No. 573.]

Sub-District.	District.	No.
A		
Abbey Holme	Wigton	573; 2
Abbots Bromley	Uttoxeter	366; 2
Abbotsbury	Weymouth	264; 4
Abbots Langley	Watford	187; 4

GENERAL INDEX

TO

REGISTRAR-GENERAL'S FIFTY-FOURTH ANNUAL REPORT (1891).

PAGES

ACCIDENT; Mortality from (Abstracts, pp. 193–199) xxii

AGES; Mean, at Marriage and Re-marriage, continued increase of . . . vii
at Death. (Tables 11–14, pp. xl–xliii) x
high Death-rates at advanced ages x
of 440,224 of the Persons married in 1891, distinguishing previous Civil Condition 68–70
at Death, of each sex, in Divisions and Counties, 1891 . . . 96–105
(*See also* DEATH RATES.)

AREA of United Kingdom and its parts. (Table 1.) . . . . xxx–xxxi
of Town and Country Districts in England and Wales. (Table 25.) . lvii
of Islands in the British Seas. (Table 27.) lix
of each District and Sub-district in England and Wales . . . 4–63
of each Division and County in England and Wales . . . 64, 66

ARMY, THE; Strength and Mortality of. (Table 29, p. lx.) . . . xxiv

AUSTRALIAN COLONIES AND NEW ZEALAND; English Emigrants to. (Table 28.) lix

AUSTRIA; Population, Marriages, Births, and Deaths. (Tables 39, 47.) . lxix, lxxiv

BANKERS' CLEARING HOUSE, 1868–91. (Table A.) vi

BELGIUM; Population, Numbers and Proportions of Marriages, Births, and Deaths. (Tables 39, 53.) . . . . . lxix, lxxviii

BIRTHS in England and Wales, 1891. (Abstracts, pp. 2–63.) . . . viii
Illegitimate. (Abstracts, pp. 2–63.) ix
Sex proportions and influence of Race thereon. (Tables 2, p. xxxii, 3, p. xxxiii, 10, p. xxxix.) ix
Premature; increasing mortality ascribed to, 1861–91. (Table H.) xxii
Aggregate Number of Names on Registers. (Table 26.) . . lviii
in Islands in the British Seas. (Table 27.) lix
of British Subjects at Sea. (Table 32, p. lxi.) xxiv
(*See also* MARINE REGISTER BOOK.)
in United Kingdom and its parts, and in other European States. (Tables 40–56.) . . . . . lxx–lxxx

BIRTH-RATES; Total, Legitimate, and Illegitimate. (Tables 2, p. xxxii, 3, 4, p. xxxiii, 10, p. xxxix.) . . . . . viii–ix
factors affecting . . . . . viii–ix
affected by Marriage-rate viii
affected by some Epidemic diseases ix
in United Kingdom and its parts, and in other European States. (Tables 39–56) . . . . . lxix–lxxx

PAGES

BLACKBURN; high Infantile Mortality in xi

CANCER; Mortality in 1891 the highest on record xxi

CAUSES OF DEATH; Mortality from the several Classes of. (Table F.) . xvii–xxii

CERTIFICATES of Marriages, Births, and Deaths issued in 1891 . . xxiii

CERTIFICATION of Causes of Death xxiii

CHANGES in Constitution of Registration Districts in 1891. (Table 57.) lxxxi–lxxxii

CHILDBIRTH and Puerperal Fever, Mortality from. (Table 23, p. lvi.) . xxi

CIRCULATORY ORGANS; excessive Mortality from, probably due to Influenza xx, xxii

COAL; prices of, 1841–91. (Table 38.) lxviii

CONGENITAL DEFECTS; increasing Mortality from. (Table H.) . . xxii

CONGENITAL MALFORMATIONS; Mortality of Infants from, in Towns and Country, compared. (Tables D., E., pp. xiv–xv) . . . xvi

CONSOLS; prices of, 1841–91. (Table 38.) lxviii

CONSTITUTIONAL DISEASES; Mortality ascribed to. (Table F., p. xvii.) . xxi

COUNTRY DISTRICTS; Mortality in. (Tables 24, 25, p. lvii.) . . xvii

DEATHS; in England and Wales, 1891 (Abstracts, pp. 2–53) x

from various Causes in England and Wales. (Table 15, pp. xliv–xlv.) . . . . . xvii–xxii

Certification of Causes of xxiii

of British Subjects at Sea. (Tables 31, 32, p. lxi.) xxiv
(*See also* MARINE REGISTER BOOK.)

Proportional Number from various Causes to 1,000,000 Deaths from all Causes, 1891. (Table 22.) lv

Aggregate Number of Names on Registers, 1842–91. (Table 26.) lviii

in Islands in the British Seas. (Table 27.) lix

in United Kingdom and its Parts, and in other European States. (Tables 40–56.) . . . . . lxx–lxxx

in Public Institutions 71–94

in Divisions and Counties, classified according to sex and age . 96–105

in England and Wales, classified according to sex, age, and cause . 108–121

in London, classified according to sex, age, and cause . . . 122–135

in Registration Counties, classified according to sex and cause . 136–159

from several causes in Divisions, Counties, and Districts . . 160–192

in England and Wales from Accident, Suicide, Murder, and Manslaughter, distinguishing method, sex, and age . . . 193–205

DEATH RATES; in 1891. (Table 2, p. xxxii.) x

of Males and Females compared. (Table 2, p. xxxii.) . . . x

in groups of ages. (Tables 11–14, pp. xl–xliii.) . . . x

excessive after middle age x

among infants; Urban and Rural compared, at daily, weekly, and monthly ages. (Tables B., C.) . . . . . xi–xii

in Urban and Rural Districts. (Tables 24, 25, p. lvii.) . . xvii

from Classes of Causes. (Table F., p. xvii.) . . . . xvii–xxii

in Army and Navy in series of years. (Tables 29, 30, p. lx.) . xxiv

in Merchant Service. (Table 31, p. lxi.) xxiv

in European States. (Tables 39–56, pp. lxix–lxxx.) . . . xxv

PAGES

DEATH-RATES—*continued.*
in years 1838–91, in groups of years, and in quarters. (Tables 2, 3, 4.) . . . . . xxxii–xxxiii
from various Causes in England and Wales, 1867–91, and in groups of years, 1858–91. (Tables 16, 17.) . . . . . xlvi–xlix
from the Principal Zymotic Diseases in England and Wales, 1838–91. (Table 18.) l
from the Principal Zymotic Diseases in London, 1842–91. (Table 19.) li
from several Causes, in Counties, 1891. (Table 20.) . . . lii–liii
of Persons, Males, and Females, 1891, classified according to Cause. (Table 21.) liv
from Measles, Scarlet Fever, "Fever," Whooping-cough, and Puerperal Fever and Childbirth in Counties, 1881–90 and 1891. (Table 23.) lvi

DENMARK; Population, Numbers, and Proportions of Marriages, Births, and Deaths. (Tables 39, 44.) . . . . . lxix, lxxii

DENSITY OF POPULATION; Persons to a square Mile, 1851–91. (Table 24.) lvii

DEVELOPMENTAL DISEASES; Mortality ascribed to. (Table F., p. xvii.) . xxi xxii

DIABETES; Mortality in 1891, the highest on record xxi

DIARRHŒAL COMPLAINTS; Mortality from, exceptionally low . . . xx
mortality of infants from in towns and country compared. (Tables D., E., pp. xiv–xv.) xvi

DIETETIC DISEASES; Mortality ascribed to. (Table F., p. xvii.) . . xxi

DIPHTHERIA; Mortality ascribed to xix
local areas especially subject to xix

DISTRICTS, REGISTRATION; Alphabetical Index of 206–209

DIVORCED PERSONS; Re-marriages of vii

DYSENTERY. (*See* DIARRHŒAL COMPLAINTS.)

EDUCATION; as shown by Signatures in Marriage Registers . . . viii

EMIGRATION from United Kingdom, 1872–91. (Table 28.) . . . lix

ENTERIC FEVER; mortality from in 1891 lowest on record . . . xix
local areas specially subject to xix

EPIDEMIC DISEASES; effect of, on birth-rate ix

EUROPEAN STATES; Populations, Numbers, and Proportions of Marriages, Births, and Deaths. (Tables 39–56.) . . . . lxix–lxxx

EXPORTS of British Produce, value per head compared with marriage-rate. (Table A.) . . . . . v–vi

FEES received at General Register Office. (Table 26, p. lviii.) . . xxiii–xxiv

FEVER; mortality in 1891 the lowest on record xix
Mortality from, in Counties, 1881–90 and 1891. (Table 23.) . lvi
(*See also* ENTERIC FEVER.)

FRANCE; Population, Numbers and Proportions of Marriages, Births, and Deaths. (Tables 39, 54.) . . . . . lxix, lxxix

GERMAN EMPIRE; Population, Numbers and Proportions of Marriages, Births, and Deaths. (Tables 39, 50.) . . . . lxix, lxxvi

PAGES

GLAISHER, JAMES, Esq., F.R.S.; Meteorology of 1891. (Tables 33–37, pp. lxii–lxvii.) . . . . . xxvi–xxviii

GUERNSEY and ADJACENT ISLANDS; Area, Population, Baptisms, and Deaths. (Table 27.) lix

HOLLAND. (*See* NETHERLANDS.)

HOSPITALS, Deaths in 71–94

HUNGARY; Population, Numbers and Proportions of Marriages, Births, and Deaths. (Tables 39, 48.) . . . . . lxix, lxxv

HYDROPHOBIA; decreased Mortality from xxi

ILL DEFINED and NOT SPECIFIED CAUSES; Mortality ascribed to (Table F., p. xvii.), and result of applications for fuller Information xxiii

ILLEGITIMATE BIRTHS. (*See* BIRTHS.)

IMPORTS; Value of, per head of Population, 1860–91. (Table A.) . . vi

INDEXES; Searches in. (Table 26, p. lviii.) xxiii
to Districts, Sub-Districts, and certain Towns 206–221

INFANTILE MORTALITY; exceptionally high in 1891 x
lowest in agricultural, highest in mining and textile counties. . x–xi
in certain counties and towns compared. (Tables B., C., D., E.) . xi–xvi
general course of, in first year of life. (Table C.) . . . xii–xiii
great excess in towns after the second month of life . . . xiii
causes of in weeks and months. (Tables D., E.) . . . xiv–xvi
in Counties (Table 10) xxxix
in England, 1838–91. (Table 18.) l
in London, 1842–91. (Table 19.) li

INFLUENCE, suggested, of Race on sex-proportions at birth . . . ix

INFLUENZA; Epidemics in 1890 and 1891 xx
Mortality directly ascribed to, 1847–8 and 1890–91. (Table G.) . xx
probable total Mortality caused by epidemics of 1890–91 . . xx
Epidemic; probable effect of, on Mortality from phthisis . . xxi

INQUESTS; in 1891 xxiii
in Divisions, Counties, and Districts 160–192

INSTITUTIONS, PUBLIC; Deaths in 71–94

INTEMPERANCE; Increase in Mortality directly ascribed to. (Table 16, p. xlvi.) xxi

INTERNATIONAL VITAL STATISTICS. (Tables 39–56, pp. lxix–lxxx.) . xxv

INTOXICATION; Accidental Deaths while in a state of 196, 199

IRELAND; Area, Population, Numbers and Proportions of Marriages, Births, and Deaths. (Tables 1, 39, 43.) . . . . xxxi, lxix, lxxi

IRISH EMIGRANTS from United Kingdom, 1872–91. (Table 28.) . . lix

ISLANDS in BRITISH SEAS; Area, Population, Births, and Deaths. (Table 27.) lix

ITALY; Population, Numbers and Proportions of Marriages, Births, and Deaths. (Tables 39, 56.) . . . . . lxix, lxxx

PAGES

JERSEY; Area, Population, Births, and Deaths. (Table 27.) lxix

JEWS; increase of marriages among vii
probable increase in proportion of vii

JEWISH MARRIAGES; increase of vii

LEGITIMATE BIRTHS. (*See* BIRTHS.)

LEICESTER; high Infantile mortality in xi

LIFE TABLES, for first year of Life. (Table C.) xii

LOCAL DISEASES; excessive Mortality from, probably due to Influenza. (Table F., p. xvii.) xxii

LONDON; Mortality from principal Zymotic Diseases, and Infant Mortality, 1842-91. (Table 19.) li
Deaths in, classified according to Sex, Age, and Cause . . 122–135
Deaths in, from several Causes, and Inquests, in 1891 . . 160

LUNATIC ASYLUMS, PUBLIC; Deaths in 71–94

MAN, ISLE OF; Area, Population, Births, and Deaths. (Table 27.) . . lix

MANSLAUGHTER; Deaths ascribed to 204, 205

MARINE REGISTER BOOK; entries of Births and Deaths in, 1891 . . xxiv

MARRIAGES; number registered in England and Wales, 1891. (Abstracts, pp. 2–67.) v
forms of celebration of. (Tables 5, 6, pp. xxxiv, xxxv; Abstracts, pp. 64–67.) vii
decline of Roman Catholic vii
increase of Jewish vii
First Marriages and Re-Marriages. (Table 7, p. xxxvi; Abstracts, pp. 64–67.) vii
of Divorced Persons vii
Ages at Marriage, proportions stated and not stated vii
of Minors declining. (Tables 7, 8, pp. xxxvi, xxxvii; Abstracts, pp. 64–67.) vii
of Minors; comparative prevalence of, in different countries. (Table 8, p. xxxvii.) . . . . . vii–viii
(*See also* AGES and SIGNATURE by MARK.)
Buildings registered for Solemnisation of. (Table 9, p. xxxviii.) . viii
in United Kingdom and its parts, and in other European States. (Tables 40–56.) . . . . . lxx–lxxx
Aggregate number of Names of Persons married, on Registers, 1842–91. (Table 26.) lviii
Conditions and ages of 440,224 of the Persons married . . 68–70

MARRIAGE-RATES; continued increase of. (Tables 2, 3, 4, 8, pp. xxxii, xxxiii, xxxvii.) v
Fluctuations of, compared with commercial fluctuations. (Table A.) v–vi
in the United Kingdom and its parts, and in other European States. (Tables 39–56.) . . . . . lxix–lxxx

MEASLES; apparent law of outbreaks xviii
course of recent epidemics of xviii
endemic in very populous areas xviii
Mortality from, in Counties, 1881–90 and 1891. (Table 23.) . lvi

MEAT; Average Prices of, 1850–91. (Table 38.) lxviii

PAGES

MERCANTILE MARINE; Strength and Mortality, and Births and Deaths of British Subjects at Sea. (Tables 31, 32, p. lxi.) . . . xxiv

METEOROLOGY of 1891, by James Glaisher, Esq., F.R.S. (Tables 33–37, pp. lxii–lxvii.) . . . . . xxvi–xxviii

MORTALITY. (*See* CAUSES OF DEATH, AND DEATH-RATES.)

MURDER; Deaths ascribed to 202, 203

NAVY, THE; Mortality in. (Table 30, p. lx.) xxiv

NEGLIGENCE; Deaths from. (*See* ACCIDENT.)

NETHERLANDS, THE; Population, Numbers and Proportions of Marriages, Births, and Deaths. (Tables 39, 52.) . . . . lxix, lxxvii

NEW ZEALAND. (*See* AUSTRALIAN COLONIES.)

NORTH AMERICAN COLONIES; English Emigrants to. (Table 28.) . . lix

NORWAY; Population, Numbers and Proportions of Marriages, Births, and Deaths. (Tables 39, 45.) . . . . . lxix, lxxii

OLD AGE; excessive Mortality from, probably due to Influenza . . xxi

PARASITIC DISEASES; Probable extent of mortality due to . . . xxi
Mortality directly ascribed to, 1881–91. (Table F., p. xvii., 16, p. xlvi.) xxi

PAUPERISM; Proportion to Population, 1849–91. (Table 38.) . . . lxviii

PHTHISIS; increased Mortality from, probably due to Influenza. . . xxi

POPULATION in 1891, and method of Estimating v
Probable increase of Jewish vii
estimated, of United Kingdom, and its Parts, distinguishing Sex, 1842–91. (Table 1.) . . . . . xxx–xxxi
of Registration Counties, 1891. (Table 20.) . . . . lii–liii
of Town and Country Districts, 1891. (Table 25.) . . . lvii
1861–71–81–91, in Islands in British Seas. (Table 27.) . . lix
of United Kingdom, and its parts, and of other European States. (Tables 40–56.) . . . . . lxx–lxxx
enumerated in 1891, in Districts and Sub-districts . . . 4–63
enumerated in 1891, in Registration Divisions and Counties . . 64, 66

PREMATURE BIRTH; Mortality of Infants from, in Towns and Country, compared xvi
increasing Mortality ascribed to. (Table H.) xxii

PRESTON; high Infantile Mortality in xi

PRICES; of Consols, Wheat, and Coal, 1841–91; and of Meat, 1850–91. (Table 38.) lxviii

PRUSSIA; Population, Numbers and Proportions of Marriages, Births and Deaths. (Tables 39, 51.) . . . . . lxix, lxxvi

PUBLIC INSTITUTIONS. (*See* INSTITUTIONS.)

PUERPERAL FEVER; Mortality from, in 1891 xxi

REGISTERS; Aggregate number of Names upon. (Table 26, p. lviii.) . . xxiii
and RECORDS in General Register Office xxiv

REGISTRATION; Progress of. (Table 26, p. lviii.) xxiii

PAGES

REGISTRATION ACT; Offences against in 1891 xxiii

RE-MARRIAGES. (*See* MARRIAGES.)

RESPIRATORY DISEASES; excessive Mortality from, probably due to Influenza xx, xxii

RURAL MORTALITY. (Tables 24, 25, p. li.) xvii

SCARLET FEVER; lowest recorded Mortality from xviii
suggested causes of diminution in Mortality from . . . xviii–xix
in London; increase in the proportion of Mortality occurring in Hospitals . . . . . xviii–xix
case-mortality from, in Metropolitan Asylums Hospitals . . xix

SCOTCH EMIGRANTS from United Kingdom, 1872-91. (Table 28.) . . lix

SCOTLAND; Area and Population, distinguishing Sex, 1842–91. (Table 1.) xxxi
Population, Numbers and Proportions of Marriages, Births, and Deaths. (Tables 39, 42.) . . . . . lxix, lxxi

SEA; Births and Deaths of Passengers (British Subjects) at. (Table 32, p. lxi.) xxiv
(*See also* MARINE REGISTER BOOK.)

SEAMEN. (*See* NAVY and MERCANTILE MARINE.)

SEX; Birth proportions vary in different localities ix
Birth proportions possibly influenced by Race ix
Death proportions x

SIGNATURE BY MARK in Marriage Registers. (Tables 7, 8, pp. xxxvi–xxxvii; abstracts, pp. 64–67.) viii

SMALL-POX; Continued low mortality from, in 1891 xvii
